CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. A special Canadian Statistical Review tape is created about the 15th of each month which contains historical and current data for all series in this Review. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The data in the base may therefore be more timely than data on the CSR tape. For additional information, see inside back cover.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movement and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
--	amount too small to be expressed
-	nil or zero.
†	advance estimates.
c	correction
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

LIST OF STATISTICAL TABLES

Section 1. Selected Economic Indicators – Analytical Summary

Charts 8-13
Analytical Summary 14-17

Section 2. Population Statistics

1. Population, by Province 18
2. Immigration to Canada, by Country of Last Permanent Residence 18
3. Immigration to Canada, by Province of (Intended) Destination 18
4. Immigration to Canada, by (Intended) Occupational Group 18
5. Births, by Province 19
6. Deaths, by Province 19
7. Marriages, by Province 19

Section 3. System of National Accounts

1. Income and Expenditure Accounts

1.1. National Income and Gross National Product 20
1.2. Gross National Expenditure, Current Dollars 20
1.3. Gross National Expenditure, Constant Dollars 21
1.4. Sources of Personal Income 21
1.5. Disposition of Personal Income 22
1.6. Sources and Disposition of Gross Saving 22
1.7. Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government 23
1.8. Implicit Price Indexes 27
1.9. Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost 27

2. Domestic Product by Industry

2.1. Real Domestic Product by Industry of Origin, Quarterly 28
2.2. Real Domestic Product by Industry of Origin, Monthly 29
2.3. Industrial Production 31

3. Financial Accounts

3.1. Financial Flows 36, 116

4. Balance of International Payments

4.1. Canadian Balance of International Payments, Current Account, All Countries 38
4.2. Canadian Balance of International Payments, Current Account, Country Distribution 38
4.3. Canadian Balance of International Payments, Capital Accounts, All Countries 39

Section 4. Labour

1. Wages and Salaries, by Province 40
2. Wages and Salaries, by Industry 41
3. Labour Force Characteristics 42

4. Selected Labour Force Series by Sex and Main Age Group

4.1 Employed 43
4.2 Unemployed 43
4.3 Participation Rates 44
4.4 Unemployment Rates 44

5. Labour Force Regional Data

5.1 Labour Force 45
5.2 Employed 45
5.3 Employed in Non-agriculture 46
5.4 Unemployed 46
5.5 Participation Rates 47
5.6 Unemployment Rates 47
6. Unemployment Insurance Statistics 48

Section 4. Labour – Concluded

7. Job Vacancy Survey

7.1 Job Vacancies 49
7.2 Job Vacancy Rates 49
7.3 Vacancies for Full-Time Jobs 50
7.4 Vacancies for Full-Time Jobs Unfilled for at Least a Month 50
8. Time Lost in Work Stoppages 51
9. Employment Indexes, by Industrial Division 52
10. Employment Indexes, by Province 53
11. Employment Indexes, by Manufacturing Industry 54
12. Average Weekly Wages and Salaries, by Industrial Division 54
13. Average Weekly Wages and Salaries, by Manufacturing Industry 55
14. Average Weekly Wages and Salaries, by Province 55
15. Average Hourly Earnings 56
16. Average Weekly Hours 57

Section 5. Prices

1. Industry Selling Price Indexes 58
2. General Wholesale Price Index 61
3. Other Price Indexes 61
4. Consumer Price Index 62

Section 6. Manufacturing

1. Total Inventories, Shipments, Orders 63
2. Manufacturing Shipments, Selected Industries 64
3. Manufacturing Inventories, Selected Industries 66
4. Manufacturing Shipments and Unfilled Orders by Economic Use Classification 68
5. Manufacturing Inventories Owned and Raw Materials by Economic Use Classification 69
6. Manufacturing Goods in Process and Finished Products by Economic Use Classification 70
7. Tobacco and Beverages 71
8. Rubber 71
9. Rubber Products 72
10. Raw Hides, Skins, Finished Leather 72
11. Footwear Production 73
12. Primary Textiles 73
13. Production of Sawn Lumber 74
14. Pulpwood, Wood Pulp and Newsprint 74
15. Primary Iron and Steel 75
16. New Motor Vehicles 76
17. Refrigerators, Freezers, Washing Machines and Clothes Dryers 77
18. Radio and Television Sets 77

Section 7. Fuel, Power, Mining

1. Electric Power 78
2. Electric Power Available, by Province 78
3. Coal and Coke 79
4. Crude Oil and Natural Gas 79
5. Petroleum Products 80
6. Metals 81
7. Non-metallic Minerals 82

Section 8. Construction

1. Building Permits, by Type 83
2. Building Permits, by Province 83
3. Dwelling Units Started, All Areas 84
4. Dwelling Units Completed, All Areas 84
5. Dwelling Units Under Construction, All Areas 84
6. Dwelling Units Started, Centres 10,000 and Over 85
7. Dwelling Units Completed, Centres 10,000 and Over 85
8. Dwelling Units Under Construction, Centres 10,000 and Over 86
9. Mortgage Loans, Approvals 86
10. Domestic Shipments of Building Materials by Canadian Manufacturers 87

TABLE OF CONTENTS – Concluded

Section 9. Food and Agriculture

1. Farm Cash Receipts, by Source 88
2. Farm Cash Receipts, by Province 88
3. Farm Implement and Equipment Sales at Wholesale Prices, by Province 88
4. Slaughter and Cold Storage Stocks 89
5. Selected Agricultural Price Indexes 89
6. Exports of Grains and Livestock Products 90
7. Milk, Milk Products and Eggs 90
8. Fish 91
9. Manufactured Food 91
10. Sugar 92

Section 10. Domestic Trade

1. Value of Retail Trade 93
2. Department Store Sales and Stocks 96
3. Value of Wholesale Sales 96
4. Chartered Banks' General Loans 97
5. Retail Trade – Consumer Credit Outstanding 97
6. Consumer Credit Balances Outstanding 98

Section 11. External Trade

1. Merchandise Exports, Major Countries and Areas 99
2. Merchandise Imports, Major Countries and Areas 100

Page

Section 11. External Trade – Concluded

3. Merchandise Exports, by Commodity 101
4. Merchandise Imports, by Commodity 102

Section 12. Transportation

1. Carloadings of Revenue Freight 105
2. Railway Operating Statistics 106
3. Operating Statistics of Canadian Air Carriers 106
4. Operating Statistics of Canadian Pipelines 107
5. Shipping Traffic 107

Section 13. Finance

1. Bank of Canada 108
2. Chartered Banks 109
3. Currency and Chartered Bank Deposits 110
4. Cheques Cashed in Clearing Centres 111
5. Life Insurance Sales 112
6. Life Insurance Payments 112
7. Security Issues and Retirements 113
8. Security Prices 114
9. Stock Exchange Statistics 115
10. Government Revenues 116
11. Government Expenditures 116

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 4, Tables 1 and 2 – Labour Income

All series in these tables have been revised from January 1971. Data for 1971 and 1972, which are available from CANSIM, appear in the February and April issues of *Estimates of Labour Income,* 72-005, Statistics Canada. Series at finer levels of detail are available on request from the Labour Income Unit, Labour Division, Statistics Canada.

Section 10, Table 1 – Value of Retail Trade

With this issue, Table 1 contains data from the new retail trade survey. For further information see Observations, page 117.

JOB VACANCIES AND UNEMPLOYMENT, 1971 TO 1974

D. Gower*

Introduction

The number of vacant jobs has fluctuated widely during the period in which estimates from the Job Vacancy Survey have been available. These fluctuations have generated a range of observations which permit the analyst to examine possible long-term relationships between the level of vacancies and another major labour market variable, the unemployment rate. The purpose of this paper is to explore these relationships, and to present a few techniques for analyzing the content and meaning of the job vacancy data.

The Labour Force Survey measures, on a monthly basis, the number of persons currently unemployed. These are defined as persons without work and seeking work. On the other side, the Job Vacancy Survey provides quarterly estimates of the number of vacant jobs, that is, jobs that are currently unfilled and are available for immediate occupancy, and for which the employer is actively recruiting. Since estimates of job vacancies measure unsatisfied demand for labour, these data, when combined with unemployment statistics, allow analysis of such problems as mismatching between supply and demand for labour, and the adequacy of the level of economic activity to employ the persons available to work.

There are a number of detailed statistical problems in comparing unemployment and vacancy data. As these have been examined elsewhere,[1] they will be listed only briefly here. There are differences in sample coverage, reference periods, the wording of questions, interview procedures and the application of such criteria as search activity. For these reasons, it is risky to attempt precise one-to-one comparisons of the two series. For example, an attempt to measure and interpret the point at which unemployment equals vacancies is to unreasonably stretch the meaningfulness of the two statistical series.

The series, however, can be compared in terms of their changes over time, an exercise in which the differences mentioned are of less importance. It has been generally predicted that unemployment and vacancies would be negatively related, possibly along a curve roughly hyperbolic in shape. The reason given for this prediction is that, in a depressed labour market with a large number of unemployed persons, the stock of job vacancies will be low. In a tight labour market, on the other hand, with few available unemployed persons and a heavy demand for labour, it will be difficult to fill jobs and many will be vacant. A beginning point is to plot the two series to see if a stable relationship seems to be emerging over the short period in which vacancy data have been available in (Chart 1).

The General Unemployment-Vacancy Rate (U-V) Relationship

No stable relationship can be seen from the simple comparison in Chart 1; however, it can be observed that part of the spread on Chart 1 is due to seasonal factors. Chart 2 illustrates this fact by following the shifts in the U-V relationship for the same quarter for the four years. For example, the solid line is a plot of the U-V relationship (not seasonally adjusted) for the first quarter of each of the years 1971 to 1974. It can be seen that the first quarter line is consistently "above" the others (that is more unemployment per vacancy), with the second quarter line slightly below it, and the third and fourth quarters further down the graph.

The probable reason for this is the seasonal pattern of hirings. In the first quarter, hirings are low[2] because of the slow winter economic conditions. Economic activity normally picks up in the spring and hirings rise. As a result, vacancies rise sharply (see Table 1) but unemployment is reduced more gradually. By the third quarter, unemployment has fallen to its seasonal minimum while vacancies are stabilized by a reduction in the hirings.

To better examine the Unemployment-vacancy Rate relationship, the data should be seasonally adjusted. Because seasonal adjustment normally requires six or more years of data to obtain reliable estimates, vacancy statistics cannot yet be adjusted in the standard manner. Therefore, a simpler device was used to remove the seasonality. A four-quarter moving average was applied to the unadjusted job vacancy and unemployment data. Although this exercise does remove seasonal fluctuations, it also smooths the series more than the standard seasonal adjustment method does. The result is a line which shows an approximation of a seasonally-adjusted U-V relationship (Chart 3).

A careful examination of Chart 3 reveals that the movement in the U-V relationship was, as a general trend, in the expected direction: when unemployment dropped, vacancies rose. However, there was a large "hump" in the middle where, for a period, the relationship changed; that is, there were more vacancies for each level of unemployment.

---

[1] Information in this Section is selected from the sections and tables of the **Review**; for example, Section 3, Table 1.1 is identified as S3/T1.1. [2] Annual data from 1946 to 1970 are in 1961 constant dollars or based on 1961 = 100

*Actual data

Note: Percentage changes are based on seasonally adjusted data unless otherwise indicated. Monthly and quarterly series and their CANSIM identifiers appear in Sections and Tables identified at the head of the data columns.

SELECTED ECONOMIC INDICATORS – ANALYTICAL SUMMARY

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitionérs. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. **Source: Quarterly Report on Job Vacancies (71-002), Statistics Canada.**

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S. I. C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

---

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, provided as a general guide, show the relative importance of the major components of the C. P. I., on average, during the year 1974. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

				inventory at end of month						
						all inventory held				ratio of inventories owned to shipments
annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	owned[3]	held but not owned	**total**	raw materials	goods in process	finished products

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments¹ by industry based on the 1970 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included.

[2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities.

[3] Includes appliances and utensils.

[4] Excluding shipments for re-processing at maker's own plant.

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Radio phonograph combinations. [4] Includes monaural and stereo with and without amplifiers. [5] Excludes producers' shipments for export. [6] Included with "total television receivers". [7] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators. **Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when their current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to revision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

Note: Components may not add to totals due to rounding and partial revisions. [1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Not available on a monthly basis. [4] Includes loans to finance companies which are affiliates of retail merchandisers. [5] Religious, educational, health and welfare institutions. [6] Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies. **Sources: Bank of Canada Review and Dept. of Finance.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

---

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada Aviation Statistics Centre (51-004) Statistics Canada.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

OBSERVATIONS

New Retail Trade Estimates

The Retail Trade Section, Merchandising and Services Division, has started publishing new retail trade estimates. The data are produced from a monthly sample survey using methodology substantially different from that used in producing the estimates published to the end of 1974.

The universe of the new survey is comprised of a variety of lists. The Revenue Canada (Taxation) list is the main source but is supplemented by chain and department store lists and an area file list. The sample is about 16,000 independent firms. Monthly estimates derived from the surveys are stratified by trade group (based on the 1960 SIC) and geographical region.

The results of the new survey will not be linked to the Census of Merchandising (as was the old survey). However, the estimates from both sources will be compared and any differences discovered will be examined. Revisions may be made if any discrepancies are found.

Estimates on the new basis are available back to 1972.

Kind-of-business Groupings

The following trade groups comprise the same kinds of business in the new survey as in the old.

- Department stores
- General merchandise stores
- General stores
- Variety stores
- Motor vehicle dealers
- Men's clothing stores
- Women's clothing stores
- Family clothing stores
- Hardware stores
- Jewelry stores

The following trade groups were broken out of the "all other stores" group of the old survey:

- Used car dealers[1]
- Automotive parts and accessories stores
- Book and stationary stores
- Florists
- Sporting goods and accessories stores
- Personal accessories stores[1]

Some trade groups were broken into smaller groups in the new survey:

Old Trade Groups	New Trade Groups
Grocery and combination stores	Combination stores[2] Grocery, confectionery and sundries stores[2]
All other food stores	All other food stores
Service stations and garages	Service stations[2] Garages[2]
Shoe stores	Specialty shoe stores[2] Family shoe stores[2]
Furniture, T.V., radio and appliances stores	Household furniture stores[2] Household appliances stores[2] Furniture, T.V., radio and appliance stores[2]
Drug stores	Pharmacies, patent medicines and cosmetics stores

The new group "grocery, confectionery and sundries stores" includes the so-called jug milk stores and other convenience stores. The addition of "confectionery stores" also enlarges this group. In the old survey, they were included in "all other food stores".

The new group "furniture, T.V., radio and appliance stores" includes electrical supply stores previously classified to the "all other stores" group. Another removal from the "all other stores" group is the "patent medicines, cosmetics and perfume stores and proprietary stores" category. This group has been combined with "drug stores" to form the new trade group – pharmacies, patent medicines and cosmetics stores.

More information on the new retail trade survey is available from R. Tanner, Chief, Retail Trade Section, Merchandising and Services Division, Statistics Canada, Ottawa, Ontario, K1A 0V4 (613-996-9304).

The Federal-Provincial Conference on Municipal Statistics

The latest session of the Federal-Provincial Conference on Municipal Statistics was held in Toronto, May 5 to 7, 1975.

---

[1] In the *Canadian Statistical Review*, Section 10, Table 1, used cars dealers and personal accessories stores have been combined with the "all other stores" category to form a residual category.

[2] Although these groups are published separately by the Retail Trade Division, the summary tables in the CSR show them grouped together.

This Conference is concerned with the development and maintenance of effective communication between Statistics Canada and provincial and territorial governments on statistical data reflecting the activities of local governments with particular reference to financial activities.

The major areas examined during the Conference were:

(1) a report from the Task Force appointed by the 1974 session of this Conference;

(2) the local government entities project;

(3) school purpose tax revenues and the Federal-Provincial Fiscal Arrangements Act requirements;

(4) planning and programming of capital expenditures;

(5) the National Task Force on Public Finance established by the Tri-Level Conference;

(6) the Federal-Provincial Consultative Council on Statistical Policy.

The Task Force Report

The 1974 Conference appointed a Task Force "to review the work of the Conference and make recommendations for its future". Its members are:

Mr. G.A. Wagdin (Chairman)
Special Advisor, Integration
Economic Accounts and Integration
Statistics Canada
Ottawa, Ontario

Mr. J.P. Taylor
Executive Director
Department of Municipal Affairs
Province of British Columbia
Victoria, British Columbia

Mr. J.S. Richmond
Director
Municipal Budgets and Finance Branch
Department of Municipal Affairs
Province of Manitoba
Winnipeg, Manitoba

Mr. M.G. Malone
Senior Policy Advisor
Municipal Finance Branch
Ministry of Treasury, Economics and Intergovernmental Affairs
Province of Ontario
Toronto, Ontario.

Mr. P.J. Dufresne
Conseiller Spécial
Bureau du Sous-ministre
Ministère des Affaires Municipales
Province du Québec
Québec, P.Q.

From the outset, it was recognized that more specific terms of reference were required and, as an initial step, six projects were established.

Task Force Project 1 – To identify ongoing information requests of a continuing nature being directed to local governments across Canada by the two senior levels of government, and to describe the manner in which the information is used.

Task Force Project 2 – To compile a listing of **additional** continuing information that the two senior levels of government intend asking of local governments in Canada.

Task Force Project 3 – To gather evidence into a systematic framework and consider the nature of follow-up consultation and research.

Task Force Project 4 – To consider the feasibility of representation from local governments at future sessions of the Conference.

The Conference agreed with the Task Force recommendation that representatives from local governments should be invited to attend future meetings and that such representation, not to exceed three participants from a province, should be determined by the principal provincial delegate in each case.

Task Force Project 5 – To consider appropriate enlargement of representation at future meetings.

In the past, delegates to this Conference have come from federal and provincial government departments. The principal delegates have been:

1 from Statistics Canada

1 from each of the provinces and the two territories.

From time to time, other federal and provincial government officials have participated representing the Central Mortgage and Housing Corporation, the Bank of Canada, the Department of Finance, the Ministry of State for Urban Affairs, and representatives from various departments of provincial governments.

The Task Force has not arrived at any firm conclusions concerning enlarged participation from federal or provincial governments. Some consideration has been given, however, to the growing importance of effective communication with a number of organizations actively engaged in research concerning local governments, for example the Ontario Economic Council, the Canadian Council on Urban and Regional Research, the

Canadian Federation of Mayors and Municipalities, and organizations such as the National Task Force on Public Finance, the Council of Maritimes Premiers, to name a few.

Task Force Project 6 – To consider the nature and extent of matters appropriately coming within the purview of this Conference.

Local Government Entities

The objectives of this project, being developed by the Public Finance Division of Statistics Canada, are:

(1) to identify all units of local government operation within the major urban areas;

(2) to identify the financial and organizational relationships between subsidiary units and the parent municipal councils as well as the interrelationships among subsidiary units;

(3) to identify those subsidiary units, if any, whose financial reports are independent of those of the municipality proper;

(4) to issue one or more documents highlighting the organization of local governments in the selected areas;

(5) to maintain such documents on a current basis through annual revision;

(6) to extend the exercise to smaller regions;

The format as tabled by Statistics Canada was approved by the Conference. It was agreed that the work should continue.

School Purpose Taxes

The Public Finance Division of Statistics Canada described the neccessity to identify grants in lieu of taxes by source in order that they may be included in the statistical compilation "school purpose taxes". The manner in which school purpose taxes are used in meeting the requirements set out in the Federal-Provincial Fiscal Regulations in connection with the Revenue Equalization Formula were discussed at some length. Provincial delegates agreed to provide the necessary information.

Planning and Programming of Capital Expenditures

Using the document that was first presented at the 1974 Conference, the Quebec delegation led a discussion on the importance of planning and programming of capital expenditures. It was conceded that this subject would receive a great deal of attention in the near future.

National Task Force on Public Finance

Mr. Eric J. Newman, Executive Director of the National Task Force on Public Finance, which was established by the Tri-Level Conference, outlined the work done to date and stressed the importance of improving the range of available information concerning the financial activities of local government and the level of comparability with similar data concerning the activities of the two senior levels of government. The key role played by the Public Finance Division of Statistics Canada was recognized.

Federal-Provincial Consultative Council on Statistical Policy

The importance of establishing effective communication between this Conference and the Federal- Provincial Consultative Council on Statistical Policy was discussed and the Summary Report of the first meeting of the Consultative Council was tabled.

Task Force Extension

The Conference closed with a recommendation that the Task Force appointed at the 1974 Conference continue its work and produce a progress report in the fall of 1975.

More information on the Conference is available from G. Wagdin, Special Advisor, Integration, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6 (613-992-2489).

New Report on Food Franchise Operations

Franchising in Canada's Food Service Industry is a new publication of Statistics Canada's Merchandising and Service Division.

The report summarizes the results of a survey (covering 1973 operations) designed to measure the overall impact of franchising in Canada's food service industry. As well, the survey collected information on franchisor/franchisee relationships, sales by product lines and the nature of facilities and services offered by franchise food serving operations.

Included in the publication with the results of the study is a section providing definitions and a general description of coverage, questionnaire content and methodology.

Copies of *Franchising in Canada's Food Service Industry, 1973,* (Catalogue 63-524, Occasional) are available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario K1A 0T6 (Price: 70 cents)

Book Publishing in Canada

In 1973, book publishers in Canada sold about 184 million books – 145 million were English, 39 million were French and the remainder, a variety of other languages. These statistics were taken from a recently completed survey by the Education, Science and Culture Division of Statistics Canada.

The survey gathered information on the number of books published, the language of publication, the country of financial control and the size of publishers' operations for 1972 and 1973.

Preliminary data are presented in the May 1975 Service Bulletin *(Book Publishing in Canada*, Service Bulletin, Vol. 4 No. 3, Catalogue 81-001). A comprehensive analysis will be available in a future publication.

More information on this topic is available from R. Bacon, Chief, Fine Arts and Media Section, Education, Science and Culture Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario K1A 0Z5 (613-995-9682).

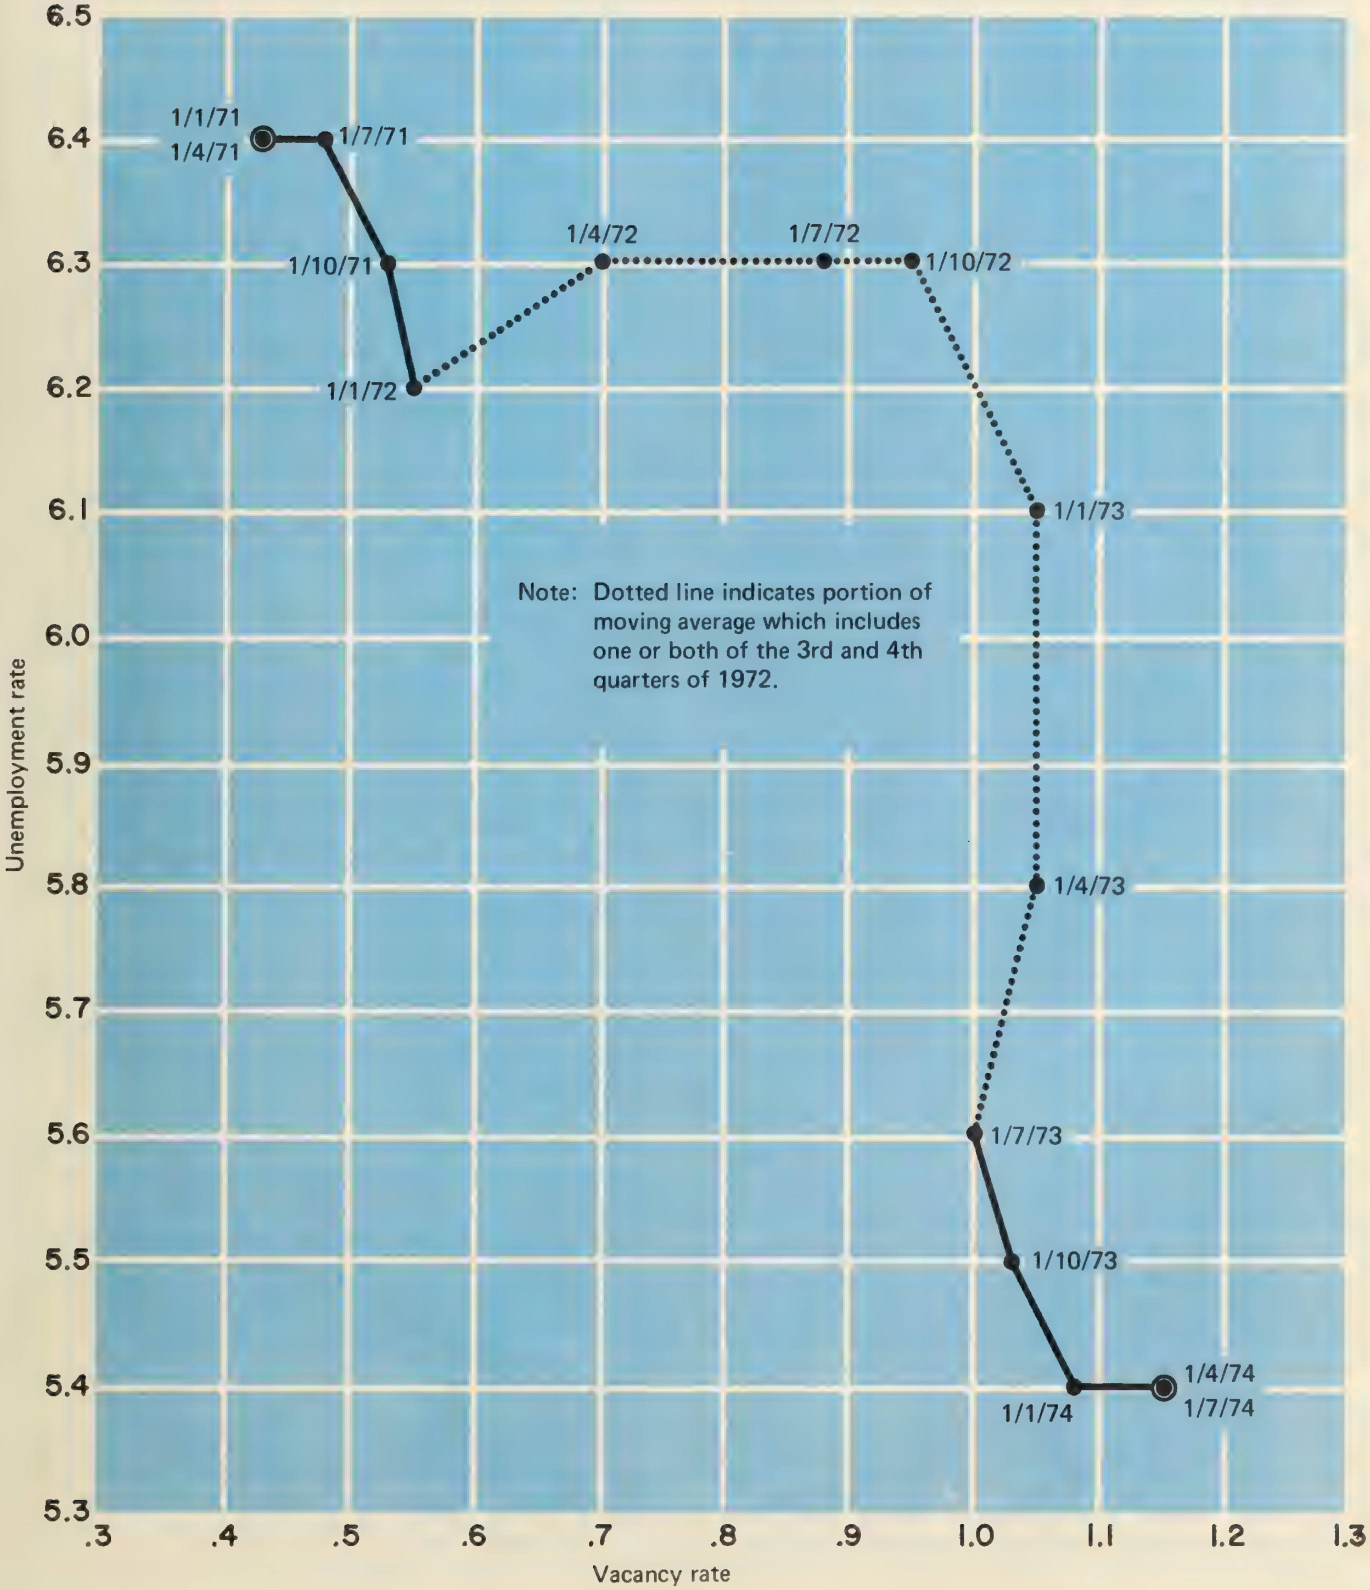
Senior Staff Changes at Statistics Canada

In February 1975, Dr. Peter Kirkham was appointed Chief Statistician of Canada, replacing Dr. Ostry. Dr. Kirkham joined the bureau in 1973 as Assistant Chief Statistician for the Economic Accounts and Integration Field. Before that, he was an associate professor at the University of Western Ontario's school of business administration.

The new Assistant Chief Statistician for Economic Accounts and Integration is Guy Leclerc, former Director General of the System of National Accounts (Current) Branch. Mr. Leclerc (who is also Chairman of the *Canadian Statistical Review* Editorial Board) has been with Statistics Canada since 1957. He first worked in the Business Finance Division, became Director of that Division in 1961 and, in 1970, was appointed Director of the Gross National Product Division. In 1973, he became Director-General of SNA (Current).

Chart – 3

4-Quarter Moving Averages of Unemployment and Vacancy Rates, Canada 1971 to 1974



Note: Dotted line indicates portion of moving average which includes one or both of the 3rd and 4th quarters of 1972.

The source of this hump can be pinpointed more accurately by reference to Chart 2. There were two quarters (the third and fourth of 1972) in which there was a clear, unambiguous shift in the U-V relationship from the previous year – both more vacancies and more unemployment were observed.

This shift is reflected in the moving-average graph in Chart 3. As one follows the line, it can be seen that when the third quarter of 1972 entered the moving average centered on the second quarter of 1972 (1/4/72), the curve shifted sharply. When the fourth quarter entered the moving average, the curve moved an even greater distance to the right. Conversely, when these quarters left the moving average (points 1/4/73 and 1/7/73), the curve shifted back.

If one examines only those points which do not contain the third and fourth quarters of 1972 (before 1/4/72 and after 1/7/73), they appear to belong to a curve of quite reasonable shape. A straight line joining the two clusters has a slope of about 10:7. In other words, over the range of data observed, the elimination of 10 cases of unemployment has, on average, coincided with the creation of 7 job vacancies. The value of this observation is reduced, however, by the measurement problems mentioned earlier.

Although it is possible to visualize these points as belonging to a common hyperbolic curve, it must be emphasized that it does not constitute proof that a stable, long-term relationship is emerging. Only the passage of time will provide the answer to this question. What is interesting, however, is the possibility that a stable trade-off line will emerge.

As will be seen later, there is further, indirect evidence that the line may not have shifted permanently by a large amount. This will be dealt with after the relevant data has been examined. Before this, however, it is essential to deal with the critical question: what caused the "hump" in the middle of the curve.

The Short-term shift

There are several possible answers to the question "why were there suddenly more vacancies with a given level of unemployment? " There may have been an increase in the amount of hiring, resulting from an increase in labour turnover. Alternately, vacant jobs may not be in the same region or occupations as the unemployed. Finally, it is possible that an employer may not be offering adequate pay or working conditions to attract the unemployed.

Although hirings are not directly measured in Canada now, some idea of turnover can be gathered by looking at the data on vacancies which were vacant longer than one month. The *Quarterly Report on Job Vacancies* shows that these failed to rise as quickly as short-term vacancies, which suggests that turnover rose between the second and third quarters of 1972.

The possibility of geographical mismatching being the cause of the shift is easily dealt with. Although there was some change in the distribution, all areas of the country except New Brunswick had strong rates of growth in vacancies. If geographic mismatching were increasing strongly, it would be expected that the growth would be largely restricted to only certain areas.

A shift in occupational mismatching is not as simple to measure. Because the Job Vacancy Survey is coded to just less than 500 occupational classes, it is necessary to cluster the occupations in order to make the analysis manageable. For this purpose, six broad categories by skill or complexity were created.[3] (The classes are: Managerial and Professional, Technical and Semi-professional, Skilled Workers and Supervisors, Semi-Skilled – Manual, Semi-skilled – Other, and Low-skilled).

Detailed descriptions of the classes are contained in the appendix; however, several comments are essential before presenting the data.

First, although every effort was made to find objective criteria for creating the classes, a large amount of subjective judgement was necessarily involved in many individual decisions. This arbitrariness means that one should not put too much emphasis on the size of the groups themselves. For example, it is not particularly important that the "managerial and professional" group is much smaller than the "low-skilled", This largely reflects the decisions made by the author as to what should go in these groups, rather than anything in the data themselves.

It is suggested that the proper way to view these groups is as a set of "baskets" analogous to those used in the Consumer Price Index. It is their relative behaviour over time, rather than their absolute size, that is important.

Tables 1 and 2 show the distribution over time of vacancies in these various classes. During 1972, there was a sharp shift toward vacancies in low-skilled and manual jobs. Table 2, for example, shows that between the second and third quarters, vacancies for low-skilled jobs rose by 105 per cent, and for semi-skilled – manual jobs, 102 per cent compared with 52 per cent for managerial and professional and 36 per cent for technical and semi-professional.

---

[3] While several persons in various sections of Statistics Canada familiar with occupational classification aided the author in creating the classes, the final responsibility rests entirely with the author. These data are not official statistics of the Job Vacancy Survey Section.

TABLE 2. Percentage Change from Previous Quarter in Full-time Job Vacancies by Skill Group, Canada, 1971 to 1974

Skill group		1st quarter	2nd quarter	3rd quarter	4th quarter
		per cent			
Managerial and professional	1971	–	39	12	– 17
	1972	–	18	52	– 10
	1973	19	3	12	– 2
	1974	4	20	20	– 18

	1972	– 5	39	58	– 9
	1973	– 1	13	–	– 10
	1974	5	27	18	– 39
Low-skilled	1971	–	64	24	– 28
	1972	23	39	105	– 44
	1973	12	35	41	– 32
	1974	– 5	45	32	– 50
Not classified	1971	–	19	17	– 35
	1972	116	10	50	– 21
	1973	19	– 4	– 3	–
	1974	– 5	90	35	– 58
Total all groups	**1971**	**–**	**46**	**14**	**– 10**
	1972	**9**	**22**	**71**	**– 11**
	1973	**– 5**	**19**	**13**	**– 13**
	1974	**3**	**23**	**18**	**– 39**

This finding weakens the possibility that occupational mismatching was the cause of the increased level of vacancies. If occupational mismatching were the cause, then the jobs becoming vacant would be of a high enough skill level that people lacking the required skills could not readily be trained to fill them. However, the additional vacancies were predominantly in jobs requiring little training.

The findings suggest that the factor at work in causing the shift in the Unemployment-Vacancy relationship was the acceptability of the job itself. To investigate this further, it is necessary to examine the rate of pay offered for the vacant jobs.

Data on the rate of pay offered for vacant jobs has recently been made available and can be obtained from the Job Vacancy Section, Labour Division. For purposes of this study, the six skill groups used to analyze occupational mismatching provided meaningful differences in average pay.

These "rate-of-pay" statistics measure the minimum rate of pay offered for a job, which might be lower than the rate at which a successful candidate would be hired. Tips, bonuses, and other non-wage earnings are not included. In addition, pay offered for vacant jobs is frequently at a low beginning rate, and does not reflect later increases due to promotion or seniority.

As Table 3 indicates, the groups which grew the fastest during 1972 had below-average pay, but they were not the lowest-paid group. The semi-skilled – other (consisting of a variety of clerical, sales and service jobs) had the lowest mean pay, yet this group had a substantially lower rate of growth in vacancy level (58 per cent) than the low-skilled (105 per cent) and semi-skilled – manual (102 per cent) categories. This suggests that pay, while a factor, was not the complete explanation for the vacancy increases. Possibly the type of work, for example, manual labour, was also a factor.

The changes in pay rates over time support the general picture of a downward shift in the skill mix. In almost every skill category, pay rates were almost stagnant between 1971 and 1972. This is consistent with a shift **within** each group (as well as between the groups) toward lower-pay jobs which would compensate for the upward drift in wages which normally goes on (a drift which would be especially likely in a time of rising vacancies and hence greater recruiting difficulties).

These findings leave unanswered the basic question of the underlying reason for the shift. Changes in available non-wage earnings opportunities may have played a role, as well as social expectations. The interesting point, however, is that whatever the cause, it appears to have affected the U-V relationship for only about one-half a year.

The Longer-run U-V Relationship

It is of considerable importance whether the data for 1973-74 can be said to be on the same U-V curve as 1971.

The ultimate proof will, be in observing the path of the trade-off line over a longer period of time. In the meantime, it is worthwhile examining the data to see if there is evidence of a lasting shift in the mix of vacancies. Two sets of data throw light on this; the percentage distribution by skill group and the average pay rates.

From 1971 to 1973 and 1974, there was a moderate lasting increase in the proportion of the vacancies in the low-skilled category – from 13 to 16 per cent (Table 1). The top skill categories settled down to a similar or lower level than in 1971. Vacancies in semi-skilled – manual jobs maintained through 1973 the proportions attained in late 1972, and then began to decrease as a percentage of total vacancies through 1974 until reaching the levels of early 1971. None of these shifts amounted to a substantial proportion of vacancies. As a general summary, therefore, the rapid compositional shifts toward lower skill levels of vacant jobs which took place in mid-1972 ceased at the end of that year, and have been partially erased by subsequent movements. The end result seems to have been relatively minor long-term changes.

The pay data support this conclusion. In 1973 and 1974, pay rates rose much more rapidly than between 1971 and 1972 within most of the skill groups, a finding which is compatible with the notion that the shift toward vacancies for jobs with lower pay had stopped.

Longer-term Vacancies

Longer-term vacancies are vacancies for full-time jobs which have been vacant one month or more. Such jobs are of interest because they may represent "shortages" or "hard-core" vacancies.

Longer-term vacancies remained a fairly stable proportion of full-time vacancies up to the middle of 1973, ranging from 28 per cent to 37 per cent.[4] Between the second and third quarters of 1973, however, the proportion jumped to 47 per cent and, up to the end of 1974, remained at a level well above that of previous years.

This pattern raises two related questions. First, why do jobs remain vacant so long when unemployed people are available, and second, what caused the sharp jump in longer-term vacancies in 1973?

---

[4] *Quarterly Report on Job Vacancies*, Catalogue 71-002, Statistics Canada, Table 5 in recent issues.

TABLE 3. Rates of Pay Offered for Full-time Job Vacancies by Skill Groups, Canada, Annual Averages 1971 to 1974

Skill group		Hourly rates			Weekly rates[1]		
		Number of vacancies	Mean pay	Predominant pay range[2]	Number of vacancies	Mean pay	Predominant pay range[2]
			dollars			dollars

* Insufficient numbers of vacancies to calculate pay rates.

[1] Includes "skill not classified".

The data on pay rates and skill groups provide the opportunity to test two possible explanations for the existence of jobs which remain vacant for more than one month. These are:

(1) the pay offered may not be sufficient to attract the unemployed who may prefer the non-wage earning alternatives; and

(2) jobs may be vacant because they demand specialized skills that are in short supply.[5]

It is assumed that both these factors are in operation. However, the data on skill groups and pay rates offer the opportunity to determine which factor is more important. This is done by comparing the longer-term with the short-term vacancies (Tables 4 and 5). If jobs remain vacant because of poor pay, then the longer-term vacancies should have lower pay than short-term vacancies of equivalent skill level. On the other hand, if scarce skills are the problem, then the longer-term vacancies should show greater concentration in the higher skill levels.

Tables 4 and 5 indicate that skill shortage predominated over low pay as a cause of long-term vacancies. Longer-term vacancies were substantially more concentrated in high-skill groups than were short-term vacancies. In addition, the pay offered was higher in every skill group except the low-skill occupations. Only among the lowest-skill vacancies is there some evidence that low pay was causing jobs to remain vacant.

One further matter remains to be investigated: what happened between the second and third quarters of 1973 when the proportion of long-term vacancies rose so sharply?

---

[5] A third factor is the geographic distribution. A proper examination of this matter involves data problems which are outside the scope of this article. However, the published data do not suggest that the geographic distribution is particularly important in explaining the existence of longer-term jobs, since they are fairly evenly distributed between provinces. This finding parallels that reported earlier for full-time jobs in 1972.

TABLE 6. Percentage Distribution of Longer-term Vacancies by Skill Group and Quarter, Canada, 1973

Skill group	1st quarter	2nd quarter	3rd quarter	4th quarter
	per cent			
Managerial and professional	12	12	7	9
Technical and semi-professional	13	18	10	13
Skilled workers and supervisors	19	22	24	23
Semi-skilled:				
Total	44	35	41	37
Manual	27	21	27	24
Other	16	15	15	13
Low-skilled	9	11	16	14
Total all groups[1]	**100**	**100**	**100**	**100**

[1] Includes "skill not classified".

Table 6 shows the breakdown of long-term vacancies by skill group for each quarter of 1973. These data reveal that the rise took place in low-, semi-skilled and skilled positions, but that managerial, professional, technical and semi-professional jobs were affected only slightly.

As Table 5 has shown, the pay offered for longer-term vacant jobs rose strongly within all the skill groups between 1973 and 1974, and particularly strongly in those groups in which the number of vacancies rose so sharply in the third quarter of 1973.[6] This picture is at least compatible with the occurence of serious recruiting difficulty over a wide range of low- and middle-skilled occupations. More information would be required, however, before this hypothesis could be confirmed.

Summary and Conclusions

Without adjustments, the data on job vacancies and unemployment seem to have little consistent pattern from 1971 to 1974, but once the effect of seasonality is removed, a pattern begins to emerge. Aside from one brief period in late 1972, the two variables have moved along a path which approximates a reasonably stable U-V curve; that is, increases in vacancies were accompanied by reductions in unemployment of almost equal magnitude.

Over the entire period, there appears to have been only minor lasting changes in the composition of vacancies. During the high growth in vacancies which took place in 1972, low-pay and low-skill vacancies grew considerably faster than others, but at the end of 1972, this trend ended and during the following two years was partly reversed.

In general, longer-term vacancies seem to be those demanding higher skill. Only among very low-skill jobs does poor pay appear to be a dominant factor in causing jobs to remain vacant for lengthy periods of time. The sudden rise in longer-term vacancies in mid-1973, coupled with sharp rises thereafter in the rates of pay for these jobs, is at least compatible with the notion that there were serious recruiting difficulties at that time.

A major question is still unanswered: how stable the relationship between unemployment and vacancies? This can be observed only by watching the vacancy level in relation to future changes in unemployment. It is hoped that this study has provided a useful background to aid in the analysis of these changes.

Appendix: The Skill Groups

The separation of approximately 500 occupation classes into a few broad skill clusterings is a highly complicated task, involving a large amount of subjective judgement. The groupings in this article are the end product of gradual refinement which spanned more than two years.[7]

Rather than a complete list of the content of each class, there follows a brief description of the criteria and data used and the general composition of each group.

The most important source of information on job skill level is the **Canadian Classification and Dictionary of Occupations** (listing some 7,000 7-digit occupation groups) which has rated each occupation for its level of general educational development and specific vocational preparation. By adding and averaging these factors for each occupation in a given 4-digit group (the level to which the Job Vacancy Survey was coded) an indication was given of the skill level of the occupation.

Other data referred to when the **CCDO** failed to provide unambiguous decisions were: the level of education and earnings of persons in a particular occupation as obtained from the 1971 Census and the pay offered for vacant jobs, from the Job Vacancy Survey.

A brief list of the classes follows:

The **Managerial and Professional** group consists of all jobs in the "managerial and administrative" CCDO major group, plus occupations for which a full university degree or equivalent is normally required for entrance. In this group, vacancies were most commonly found for engineers and accountants.

The **Technical and Semi-professional** group contains occupations which demand high levels of skill but not normally a full university degree. Most important occupations in terms of vacant jobs were draughtsmen, nurses, health technicians and therapists, laboratory technicians, technical salespersons and police.

---

[6] One factor causing this rise in pay was undoubtedly the accelerating wage and price inflation in the economy during this time. However, the rates of pay offered for vacancies in the fastest-growing skill groups (semi-skilled and low-skilled) increased more than 20 per cent – a higher growth rate than wages generally. Another factor which may affect the change in pay rates is a shift inside the skill groups. Within each group, there is a range of skill levels. Therefore, the mean pay rate for the group could be affected by a change in the number of vacancies in the various skill levels within the group. As was seen earlier, there is evidence that such a shift held down pay rates for full-time vacancies in 1972. In the case of longer-term vacancies, any shift is probably also toward the lower end, since this was the pattern of movement between the groups. Therefore, the actual pay rise is probably greater than that indicated by the data in Table 5.

[7] During this refinement process, there have been substantial changes from the groups published by the author in the April 1973 issue of the *Canadian Statistical Review.* These two sets of groupings are not comparable.

The **Skilled Workers and Supervisors** group is made up of jobs normally considered to be skilled trades, plus supervisors and foremen and a few white-collar occupations considered to be of equivalent skill levels. There is probably some overlap in skill level with the "technical and semi-professional" group, as indicated by the closeness of the pay ranges. The largest numbers of vacancies were for construction trades, mechanics, welders, machine tool makers, and stenographers.

The **Low-skilled** group consists of jobs for which virtually no training is required for entrance; that is, jobs for which persons can be trained on the job in a short period. Largest groups were labourers, waitresses, sales clerks, chambermaids, janitors, food processing workers, and some assemblers.

The **Semi-skilled** group is essentially a residual class after the other groups have been defined. Because of its size, it has been divided into "manual" – which is factory work, materials-handling or other highly physical activities, and "other" which consists of a miscellany of office, sales and service activities. These two subsets should be regarded as roughly equal in skill.

About 24 occupations were judged to be insufficiently homogeneous in skill to be assigned anywhere, and were put into a "not classified" group. Unpublished data show that average pay rates for these occupations is in the same range as the pay of the semi-skilled group.

As mentioned in the text, these groups are highly arbitrary. It is the change over time in the number of vacancies in the groups that is of interest.

An important point about these groups is that they were created as a measure of skill only. Although there may be connotations of status in the titles of the skill groups, they were not designed to reflect such a variable.

Detailed listings of the CCDO groups included in each class can be obtained from the author upon request. Persons comtemplating the application of these groups to other data sets should be aware that 4-digit detail is absolutely essential as a starting point.

This is the French edition of the *Canadian Statistical Review.*

Canadian Statistical Review Supplements

1–004 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by Statistics Canada and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review.* Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series (Bilingual).

1–206 *Annual Supplement to the Canadian Statistical Review*—Price $1.40 (Free to *Canadian Statistical Review* subscribers.)

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review.* The series extend back to 1946 or as far back as the data are available (Bilingual).

1–505 *Canadian Statistical Review—Historical Summary 1970*, E. and F. Price $1.50 (Free to *Canadian Statistical Review* subscribers)

This publication replaces the *Historical Summary* 1963 (catalogue no. 11-502, Occasional). It contains annual data for series published in the monthly *Canadian Statistical Review* (11-003). Its contents, table headings and table numbers, with a few exceptions, are the same as those in the tabular section of the *Review.* All tables include 1970 data, some have 1971, and extend back to 1926, or as far back as available. The figures were the latest available early in 1971.

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française. Revue Statistique du Canada nº 11-003F au catalogue.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted (SA) monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) which is omitted from this publication for lack of space. The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. The date in the base may therefore be more timely than data on the CSR tape.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 11, Tables 3 and 4 – Merchandising Exports and Imports

The external trade indexes of exports and imports have been time-rebased from 1968 = 100 to 1971 = 100. For further information see *Observations* page 129.

THE CANADIAN GROSS NATIONAL PRODUCT IN CONSTANT 1971 DOLLARS[1] SOME PROBLEMS IN MEASURING PRICES AND QUANTITIES

Jacob Ryten and Stewart Wells*

With the publication of the Gross National Product estimates for the first quarter of 1975, Statistics Canada expressed for the first time the economy's output of final goods and services in terms of 1971 dollars. Previously, calculations of "real" product had been expressed in terms of 1961 dollars, which in turn superseded 1957 dollars, and earlier still, 1949 dollars. Every time the year of reference or the "price base" of the Gross National Product has changed, data for previous periods have been recalculated often with the result that implied growth rates and structural relationships have also changed. Such changes may in some instances affect the perception of the economy's recent past, not to mention its current prospects. Why are there such periodic shifts in the "price base" carried out? What is the justification for introducing them now?

The indexes of price and quantity of exports and imports were also changed. The 1968 weights used for the calculation of average prices were replaced by current weights; the current weights implicitly used for the calculation of quantities were replaced by 1971 values of trade. Similar questions may be asked about the reasons for changing the method of calculation of the trade indexes.

This article provides a bird's eye view of some of the effects of rebasing by comparing the latest data for the principal components of expenditure on the Gross National Product with the corresponding data expressed in terms of 1961 dollars. Major changes in "real" product and in the development of prices over the period 1971 to 1974 are highlighted.

There is also a discussion of some of the broader aspects of the analysis of GNP in terms of prices and quantities as an attempt to provide users with the underlying reasons for the change and its possible effects.

The table below shows the 1971 - 74 cumulative growth rates for each of the principal components of Gross National Product in terms of prices and quantities.

In general, the effects of rebasing were noticeable for most of the major components of expenditure on GNP, but not uniformly so.

The growth rate in consumer expenditure was reduced by about one per cent, and by 1.4 per cent in gross fixed capital formation and imports of goods and services. Growth in government expenditure was most sharply reduced – by 2.8 per cent. On the other hand, rebasing had little impact on exports of goods and services.

By and large, these effects are in line with theoretical predictions. Aggregate real growth rates between any two years (or any two quarters) tend to be reduced as a result of rebasing. This may not be intuitively obvious. It arises from the fact that constant dollar values are the product of quantities by base year prices. But prices which were relatively lower in the new base year give less weight to their counterpart quantities. And it is likely that these are the prices which, on balance, are associated with the faster rising quantities. This, in turn, will result in reducing overall growth rates. Further, because implicit prices are obtained as the ratio

TABLE 1. GNP's Prices and Quantities based on 1961 and 1971 Dollars: A Comparison of Growth Rates 1971 - 74[1]

	"Real" GNP		Implicit price deflator	
	1961	1971	1961	1971
	per cent			
Personal expenditure on consumer goods and services	20.3	19.2	22.0	23.2
Government current expenditure	18.0	15.2	24.9	27.9
Gross fixed capital formation	24.9	23.5	26.8	28.2
Exports of goods and services	14.7	14.2	49.7	50.4
Imports of goods and services	37.5	36.1	33.2	34.6
Gross National Expenditure[2]	**14.8**	**14.1**	**27.7**	**28.6**

[1] Calculated on the basis of the same raw data.
[2] Excluding the residual error and the value of physical change in inventories.

---

* Mr. Ryten is Director of the External Trade Division and Mr. Wells is Associate Director-General, Gross National Product Division.

[1] A note on the Statistics Canada major rebasing program was featured in the May 1975 issue of the *Canadian Statistical Review.*

of current dollar to constant dollar aggregates, lower real growth rates carry with them equivalent higher rates of price increase. Unfortunately, much more than this cannot be said in advance, since there are both compensating and cumulating changes at the fine level of detail at which the rebasing process is carried out. On the other hand, a more fundamental discussion of what GNP is, how it is analysed into prices and quantities, and what problems surround such an analysis, may be of help to users of the data interested in evaluating the recent revisions.

In most countries today, there is a commonly adopted measure of aggregate economic performance, common in the conceptual sense as well as in the narrower sense of being compiled according to procedures laid down by international statistical agencies[2] with the agreement of their member countries. This measure is the sum of the values of all final goods and services produced by the national economy in the course of a given period of time, and is known as the Gross National Product (GNP) of a country. In turn, the GNP is part of a wider framework known as the country's System of National Accounts (SNA). Estimates of GNP are comparatively recent. They seldom predate the Second World War, but their adoption is now almost universal.[3] Their dominance is such that in many countries, or at least those with advanced statistical systems, the majority of other economic statistics are compiled with regard to their place in the national accounting framework.[4]

The System of National Accounts is widely used to summarize structural relations in an economy and to measure changes in its performance over time. Both purposes require the statistical separation of the value of goods and services produced into **price** and **quantity** components, a task which is not always understood by even the more experienced users of the national accounts.

Within the SNA, value is defined to be equal to the product of price and quantity, but this superficially simple identity conceals numerous conceptual and methodological difficulties. For instance, values can be aggregated in a straightforward fashion, but quantities cannot. Values are measured in dollars, while quantities are expressed in different physical units which have to be converted into some common denominator before aggregation. Individual prices cannot be unambiguously averaged. Average price, and more importantly perhaps, change in average price, is a concept which is only meaningful when some measure of relative importance is attached to each price entering the calculation. Finally, since prices and quantities are interdependent, apparent changes in one can hardly be interpreted in isolation from their effect on the other.

These difficulties, the lack of independence between the two variables, the need to find a common denominator to aggregate quantities, and the need to define how prices ought to be averaged, contribute in like proportions to the ambiguities in the analysis of price and quantity change. In practice, several conventions make it possible to carry out the analysis, but while most of them may be sensible, all of them are arbitrary.

The Canadian National Accounts are expressed initially in value terms, that is to say, the quantities of goods and services currently produced are aggregated by means of current prices. They are then expressed in terms of quantities aggregated by means of the prices that prevailed at a past reference period. The ratio between these two measures is a measure of the price change that took place between the reference period and the period under review. In Canada, the reference period has just been changed from 1961 to 1971. And while these years were chosen for sensible reasons, in a strictly theoretical sense the choices were arbitrary.

Any other time frame could have been chosen instead and its relevant prices applied to all measures of goods and services. Suppose that in any period, there are measures $q_i \, (i = 1 \ldots\ldots n)$ where q_i represents the physical output of a final good or a service.[5] For example, in the period under review, so many tons of steel were produced, so many kilowatt-hours of electricity were generated, or so many bushels of wheat were harvested. To compute the total value of production, q_i must be multiplied by an appropriate price, p_i, assuming that steel, electricity, and wheat are well-defined commodities and each has its own price. The national product is calculated as the sum $\Sigma q_i p_i$ and if the p_i's are held constant, the ratio $\frac{\Sigma q_{i_t} p_{i_o}}{\Sigma q_{i_o} p_{i_o}}$ where t and o are time periods, reflects the change in the q_i's.

Of course, this is not strictly true because the q's and p's interact and the q's would not have been what they are if prices had stayed constant. Assuming that the change in the pattern of quantities produced that takes place because of price change is relatively insignificant, the ratio is a sensible approximation to a measure of variation in the output of goods and services. But the point to bear in mind is that the calculation is possible for any time period chosen for the p_i's; a relative measure of change could be derived had the choice been p_{i_k} rather than p_{i_o}.

---

[2] The original United Nations System of National Accounts and Supporting Tables (SNA) was first published in 1953.

[3] In Canada, the first annual estimates of a balancing set of National Income and Expenditure Accounts were published at the end of 1945. Measures of National Income alone though are older (cf. R.H. Coats, "National Wealth and Income of Canada", Monetary Times, January 3, 1919).

[4] Countries with centrally planned economies express their aggregate accounts in terms of Material Product Balances, a system which is conceptually different from the SNA.

[5] For simplicity, it is assumed that services are measurable in some physical sense, for example, the number of concerts or haircuts provided per time period, and that there are no changes over time in the quality of either goods or services.

However, the choice of a time period for the set of reference prices may have an influence on the ratio defined above. If output in year o and in year t were valued at the prices of year k, the ratio would be different for different patterns of prices in years k and o. A simple example of this is shown in Table 2.

TABLE 2. Differences in Volume Comparisons using Two Sets of Reference Prices: A Hypothetical Example

	Quantities produced		Reference prices dollars per unit		Values at alternative prices			
Period	o	t	o	k	p_oq_o	p_oq_t	p_kq_o	p_kq_t
Commodities:								
Steel (tons)	1	2.5	.1	.2	.1	.25	.2	.5
Electricity (kwh.)	100	100.0	.001	.0005	.1	.1	.05	.05
Wheat (bushels)	5	2.5	.02	.02	.1	.05	.1	.05
All quantities					.3	.4	.35	.6

$$\text{Ratio } \frac{\Sigma p_oq_t}{\Sigma p_oq_o} = 1.33 \qquad \text{Ratio } \frac{\Sigma p_kq_t}{\Sigma p_kq_o} = 1.71$$

The import of this may be seen from two other examples. In the first, imagine that while identical prices prevail in Ottawa and in Vancouver, average expenditure patterns are different. A comparison of the average price level could produce contradictory results if it were successively calculated on the basis of Ottawa, Vancouver, or of some third location's pattern of consumer expenditure.

In the second example, prices are different in Ottawa and Vancouver. Imagine a consumer with a given nominal income attempting to determine where his expenditure could be optimized in terms of command over real goods and services. Assume that Ottawa and Vancouver are opposite extremes of a broad spectrum of consumer expenditure patterns. It is reasonably safe to suggest that for a given nominal expenditure, more goods and services can be purchased in Vancouver relative to Ottawa, the more the allocation of the expenditure approximates that which is typical in Vancouver. The converse is likely, the more the allocation of expenditure resembles what is typical in Ottawa.

Debate among economists and statisticians on the properties of the average best suited to yield unbiased results when comparing two periods has gone on for many years. The technique for carrying out these comparisons is at least two centuries old and known as the calculation of index numbers.[6] The use of these numbers in economics was initially viewed with a marked degree of skepticism.[7] Indeed, it was not until the end of the 19th century that professional economists began to make extensive use of statistics expressed as index numbers and to contribute to the literature on the theoretical formulations of indexes. The latter assumed considerable importance as certain branches of theoretical economics became more sharply defined and nowhere was this more apparent than in the context of the quantity theory of money and of the theory of consumer demand. Consumer demand theory predicts that under certain conditions, there will be a shift away from commodities whose price has become relatively higher. Accordingly, an index number calculated on the basis of expenditures in the past reference period will tend to "overstate" the average increase in prices to the extent that consumers have re-allocated their expenditures away from the commodities with the faster rising prices, and in favour of those with the slower rising prices. Conversely, an index number calculated on the basis of today's expenditures will "understate" the price change from past periods by failing to attribute to those periods the original importance of commodities from which the consumer moved away.

These two alternative ways of calculating index numbers[8] constitute upper and lower bounds to the

---

[6] One early record of the definition of index numbers dates from 1798 (cf. Sir George Evelyn, Philosophical Transactions of the Royal Society). An earlier record attributes them to one Gian-Rinaldo Carli who, around the middle of the 18th century, proposed to calculate the change in the price of a few commodities as the unweighted average of their price relatives.

[7] "... few theorists (1790 to 1870) took kindly to it (the method of index numbers). Wheatley was the first one to do so... Most of the rest, up to and including J.S. Mill, distrusted it or even did not grasp its possibilities..." J.A. Schumpeter, History of Economic Analysis, Allen and Unwin, 1954.

[8] They are commonly referred to by the names of their inventors: Etienne Laspeyres (base-weighted, 1869) and Hermann Paasche (current-weighted, 1874).

[1] Information in this Section is selected from the sections and tables of the **Review**; for example, Section 3, Table 1.1 is identified as S3/T1.1. [2] Annual data from 1946 to 1970 are in 1961 constant dollars or based on 1961 - 100

*Actual data

Note: Percentage changes are based on seasonally adjusted data unless otherwise indicated. Monthly and quarterly series and their CANSIM identifiers appear in Sections and Tables identified at the head of the data columns.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitionérs. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] This item differs from column 6, table 1.1 by excluding the adjustment which has been made to take account of the accrued earnings arising out of the operations of the Canadian Wheat Board and the Canadian Co-Operative Wheat Producers. [2] Includes all interest on the public debt paid by government to persons. [3] Charitable contributions and bad debts. **For source see table 1.9.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1. 9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

Table 2.3: industrial production, volume indexes (1961 = 100), based on the 1960 standard industrial classification – continued

year and month	durable manufacturing																
	primary metal industries					metal fabricating (ex mach. & transportation equipment)							machinery (except electrical)	transp. equipment		
	total	iron & steel mills	steel pipe & tube mills	iron foundries	smelting and refining	total	boiler & plate works	fabricated structural metal	ornamental & architectural metal	metal stamping, pressing &coating	wire & wire products	hardware, tool & cutlery		total	aircraft and parts	motor vehicles[1]

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. **Source: Quarterly Report on Job Vacancies (71-002), Statistics Canada.**

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S. I. C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

Table 12: average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification (dollars)

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explonatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, provided as a general guide, show the relative importance of the major components of the C. P. I., on average, during the year 1974. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
				owned[3]	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 3: manufacturing inventories[1] by industry based on the 1970 standard industrial classification (million dollars)

annual average and month	total inventories owned	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), Statistics Canada.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63 007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

[1] These totals include all generating agencies producing over twenty million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over twenty million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Energy Statistics (57-001), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators. **Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when th r current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to revision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n. e. s. and fishery foods and feeds n. e. s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
[2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months.
[3] Includes baking and frying oils and fats.
[4] Includes stocks held by manufacturers and other warehouses.
[5] Includes fresh sausage, frankfurters, weiners and all other sausage.
[6] Includes solid, coated, bulk, packages and novelties.
[7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) ('000 tons)		total revenue cars loaded (carload only)	farm products and food						mine products			
	unadj.	S.A.		wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash	coal, sand, cement and other mine products

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada Aviation Statistics Centre (51-004) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001). Statistics Canada.**

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

SOURCE: FINANCIAL FLOW ACCOUNT (13-002), STATISTICS CANADA.

(continued from page 7)

degree of over-or-under estimation of the "correct" price change. Conscious of this, many authors attempted to formulate a measure, located in between the two bounds and not affected by the bias of either. Of the proposals put forward, Irving Fisher's geometric average of Paasche and Laspeyres has come to be the most widely regarded as the closest approximation to an "ideal" index number.[9]

It has since been shown[10] that for every comparison where both prices and tastes changed, there are as many index numbers as one cares to conceive. But statistical programs are still being changed to accommodate the notion of an ideal index number, and many calculations are laboriously duplicated so that measures of Paasche and Laspeyres may be regularly compiled.

Today, when computing power is much more accessible than 50 years ago, the attempt to derive Fisher's index seems less radical than it did earlier in this century. Several countries have adopted it and apply it to those flows which they feel would be unacceptably distorted had they been estimated on the basis of the more usual approach. But, for many variables in the economic system, the derivation of current expenditure patterns is impossible leaving as the only option that which takes as reference the situation measured for a past period.

To the extent that circumstances between one place and another or one time period and another do not differ markedly, the differences of measurement arrived at by the use of alternative weighting patterns may be small and of no real significance. However, the farther in time the present is from the reference period, and the greater the change in relative prices over the periods being compared, the more likely it is that expenditure patterns will have undergone substantial alteration. Under these conditions, overall measures of price and volume change may be substantially different depending on the reference period adopted. During the last decade, the impact of these alternative measures was of no great public concern because structural changes were relatively small and because quantities seemed to increase naturally and steadily, accompanied by tolerable price increases. By and large, any technique for the compilation of index numbers would have yielded similar answers. Recently, however, two developments upset this pattern. The first was the sharp acceleration in the rate of inflation;[11] the second, the massive re-distributions that have occurred in the relative quantities purchased and sold abroad.

Until recently, the Canadian National Accounts were based on a 1961 relative price structure, but few of the 1961 structural relations hold today. For some components, prices have risen more, from 1971 - 74, than in the decades that preceded and followed 1961. In some cases the increase has been about the same as in the previous ten years, while in others the change has been substantially less. The relative proportions in which goods and services are produced and consumed have also changed. Because these changes have occurred, the time frame and method of calculation – Paasche, Laspeyres, or Ideal – are no longer matters of indifference.

But, of course, such considerations are not the only ones in deciding how often a reference pattern should be brought up-to-date. Many countries have weighed the wisdom of revising too often and have preferred to standardize reference years, in keeping with international recommendations. The prudence of this stand is partly justified by the intimate relationship that exists between the official economic statistics and the public's perception of recent economic history. A process that results in continually upsetting such a perception without making a noticeable contribution to the quality of the data can hardly be defended.

In the National Accounts tables, there are statements of the Gross National Product in current dollar or nominal terms, the Gross National Product measured in a set of reference prices, and a set of ratios between these two measures called the implicit price deflators. These are described as "deflators" in the sense that if divided into the measure of current dollar change, the measure at constant prices is reproduced. The deflators have, in many instances, a counterpart which is not calculated in the context of the National Accounts. For instance, the deflator of consumer expenditure on goods and services should be directly comparable with the Consumer Price Index. But, whereas the latter is calculated by averaging current prices with a past pattern of consumers' expenditures, the implicit price deflator is

---

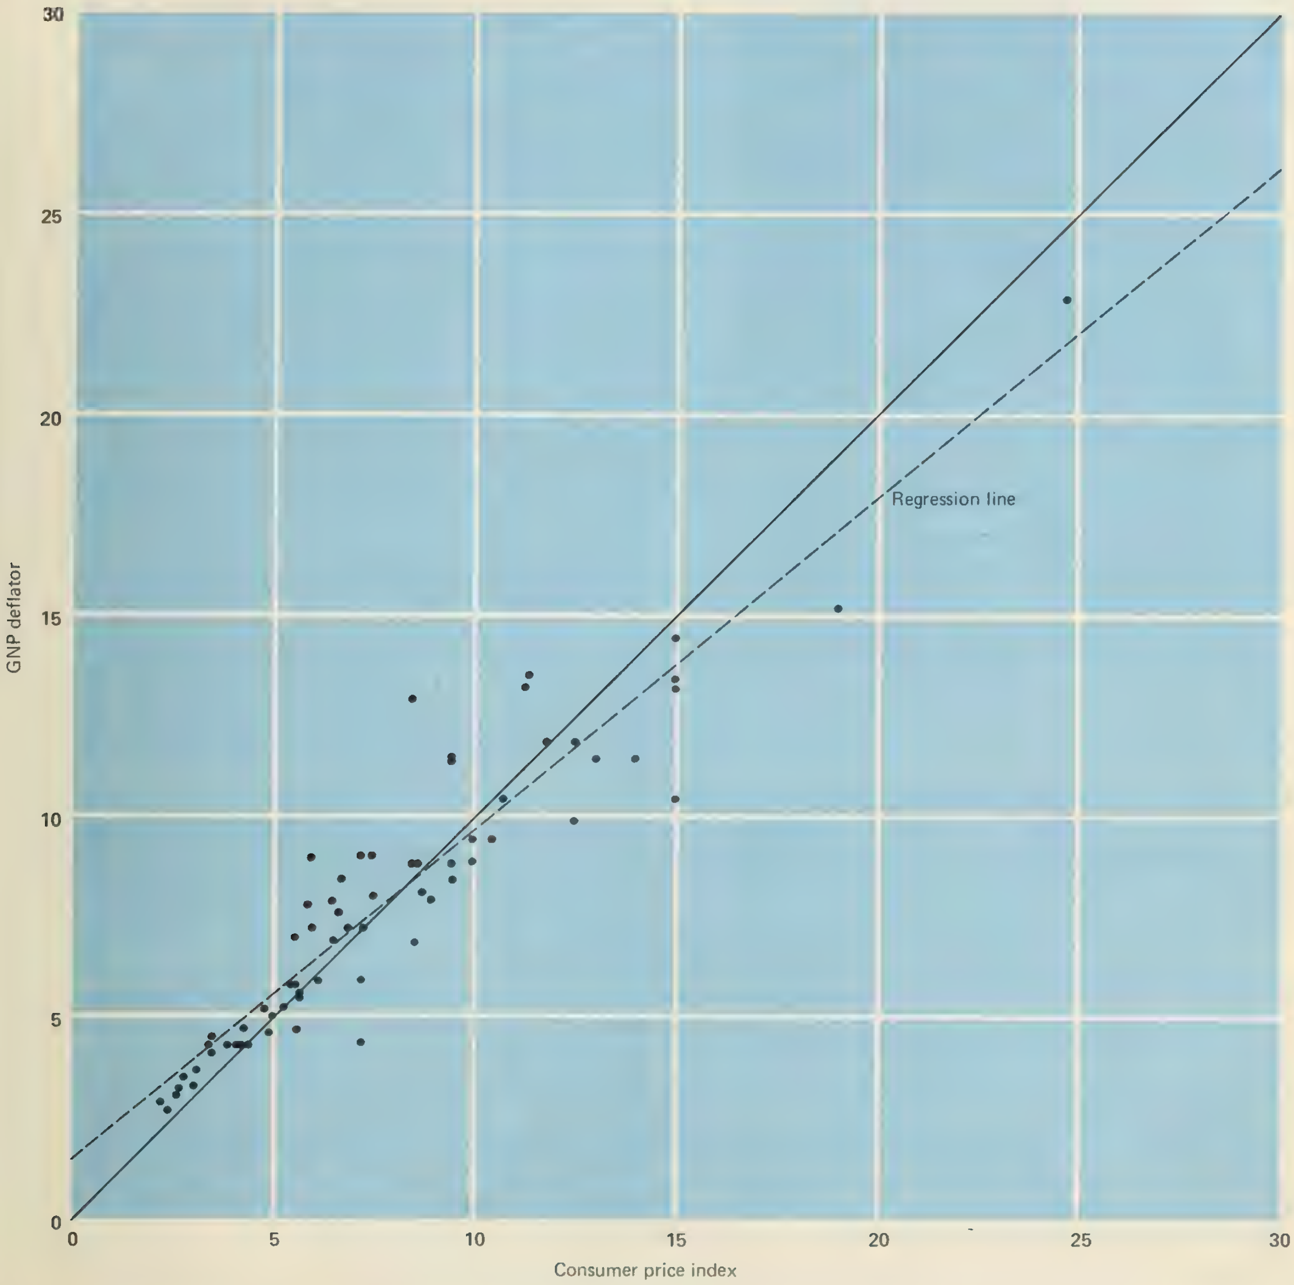
[9] Irving Fisher: *The Making of Index Numbers* (1922). But also cf. *The Purchasing Power of Money* (1911) by the same author which contains many of the ideas developed in the later work. The following is the enumeration of Fisher's conditions for an "ideal" index: (1) If the prices of all component goods double, the index should double; (2) the index between any two dates will not be changed if the base period of the index is changed from one date to another; (3) a change in the units in which the good is expressed (quantity units or type of currency) should not change the index; (4) the product of the index number of price and the index number of quantity should equal the ratio of the values of total expenditure between any two compared dates.

[10] R. Frisch: "Necessary and sufficient conditions regarding the form of an index number which shall meet certain of Fisher's tests", *Journal of the American Statistical Association*, December 1930. This demonstrates that Fisher's criteria for an ideal index cannot all be met in a situation involving more than one good. Samuelson and Swamy (cf. *American Economic Review*, September 1974) show that Fisher's criteria can be approximated if all consumers have unit elasticity preference curves.

[11] The accompanying price rises were not distributed among all commodities in a proportional way: the price of some commodities increased much faster than others.

Chart — 1

Scatter Diagram of Alternative Measures of Price Change in 17 OECD Countries from 1960 to 1974



"implicitly" weighted with consumers' current allocation of expenditure[12] and, to that extent, the two may differ.[13]

In times of very mild inflation, the differences between these two measures are so small that they can be used interchangeably (apart from the fact that one may be more comprehensive than the other, or one may be more frequently produced, or is more timely). However, when rapid inflation is taking place, or when massive shifts in relative prices are occurring, the difference between the two could attain significant proportions.

Chart I is a scatter diagram of annual rates of change in the Consumer Price Index of 17 countries in the OECD area plotted against the corresponding deflators of consumer expenditure in the National Accounts. The annual percentage changes apply to three different periods: the average annual change in the period 1962 - 72; the change from 1972 - 73; and the change from 1973 - 74.

All observations were pooled together to construct the diagram. It shows that as long as rates of annual change do not exceed 6 per cent or so, the dots are fairly evenly clustered around the 45 degree line. However, once the rates of inflation go above this figure, the CPI changes, on balance, exceed those of the deflator. A regression line fitted to the scatter diagram confirms that the changes measured by CPI tend to exceed those measured by the deflator.

But there are many qualifications to the data on which the diagram is based. The different countries observed do not have the same year as a base weight and those whose base year is oldest may perhaps exert a disproportionate weight on the comparison. Further, no consumer expenditure deflator is a perfect current-weighted index. At best, it is only partially current-weighted, as there may be base weights within each of its constituent categories. Lastly, some countries, if not most of them, allow for significant conceptual differences between what is included in consumer expenditure in the national accounts and the categories considered for the compilation of the Consumer Price Index. Notwithstanding these qualifications, this exercise could have been used as a crude preview of the change in the Canadian measure of annual rates of price change with the weighting patterns of 1961 replaced by the patterns of 1971.

When the reference frame of the Canadian National Accounts is moved forward, changes in the time path and in the structural relationships of GNP will appear, as they appeared in the case of the current revision. This is not a case of changing figures because of inaccuracies in their earlier versions, but simply a consequence of the measuring conventions so far discussed.

The possible consequences of the increase in the average amplitude of price change on the precision of statistical measurement and indeed on the relevance of standard measuring techniques are not yet known. To illustrate, Table 3 compares the 12-month changes in the quarterly Canadian GNP at constant prices with the corresponding changes in the implicit deflator. The comparison spans the period 1962 - 74.

The average change in the deflator has more than doubled and the variability of the change has increased by about one-half. There has been no compensating decrease in the average change of GNP at constant prices.

In addition to showing that aggregates have changed at an accelerated pace, some evidence is required to contend that structural patterns in the economy have also changed at a faster rate than before. For it is the effect of rapid change on structural relationships that has an adverse impact on the precision of statistical measuring tools. The substance of the concluding paragraphs of this paper is to suggest that this is the case.

TABLE 3. Amplitude and Variability of Change in Canadian GNP

	Average 12-month change		Coefficient of variation of change	
	1962 - 71	1971 - 74	1962 - 71	1971 - 74
		per cent		
GNP at constant prices	5.46	5.55	.35	.34
Implicit price deflator	3.28	7.20	.36	.55

---

[12] Let the measure of value change be $\frac{V_t}{V_o} = \frac{q_t p_t}{q_o p_o}$. Assume that quantities are calculated by an aggregation $\frac{Q_t}{Q_o} = \frac{\Sigma q_t p_o}{\Sigma q_o p_o}$ via base prices. The ratio $\frac{V_t}{V_o} \div \frac{Q_t}{Q_o}$ is effectively equal to $\frac{\Sigma q_t p_t}{\Sigma q_t p_o}$, which is the measure of price change obtained by comparing the "current" weighted price averages.

[13] This account of how the GNP components in constant dollars are established is greatly simplified. In practice, many sub-aggregates in constant dollars turn out to be mixtures of current and base-weighted components. However, this does not affect materially the argument pursued here.

In Tables 4 and 5, there is a comparison of the variability over time for the implicit price deflators of GNP, the major categories of the Consumer Price Index, and a selection of commodity groupings that account for most of the value of Canadian merchandise exports. There is an inevitable element of arbitrariness in the way in which the aggregates were decomposed, but to mitigate it, two constraints were imposed. The first was to decompose the aggregates into roughly the same number of elements. The second, was to measure the variability of the distribution of relative importance which showed that there was no marked imbalance among the aggregates.

Two aspects of each aggregate were tested: the dispersion of the price indexes of its components and the shifts in the share pattern (weights) of those components. The periods chosen for the comparison were 1961 - 71 and 1971 - 74. The use of 1971 as a watershed is convenient in that it is the new reference year for all index numbers published by Statistics Canada.

Table 4 compares the dispersion of the component price indexes of the three aggregates. In all cases, the annual rate of change accelerated in the recent period (for consumer and export prices, the total change in the last three years exceeded that of the ten previous ones) and the component indexes tended to spread out more in recent years than during the 1960's. Nowhere were these two effects more sharply marked than in the case of export prices. The dispersion of export prices was more than three times that of consumer prices and about seven times the dispersion of GNP deflators.

Table 5 provides summary measures of structural change in the three aggregates.

TABLE 4. The Dispersion of Component Price Indexes Over Time: A Comparison of Three Aggregates

	Consumer prices		Implicit deflators of GNP		Export prices	
Period	1971/61	1974/71	1971/61	1974/71	1971/61	1974/71
Measures:						
Mean	112.7	141.6	134.8	128.1	124.4	163.6
Standard deviation	8.2	23.8	16.9	10.7	21.3	74.1

Note: For purposes of comparison, the 1971 prices were put on a 1961= 100 base and the 1974 prices on 1971 = 100. If the various measures had been expressed at annual rates, the events of the latest three years would have contrasted even more sharply with those of the previous ten. The argument is not affected by the fact that both the export and the consumer prices referred to are of the Laspeyres-type whereas the implicit price deflators are approximate Paasche-type indexes.

TABLE 5. Changes in Structural Patterns Over Time: A Comparison of Three Aggregates

	Absolute change[1]		Relative change[2]	
	1961 - 71	1971 - 74	1961 - 71	1971 - 74
Consumer price indexes:[3]				
All components	.9	. .	30.0	. .
Components with increasing share . . .	1.0	. .	32.3	. .
GNP deflators:				
All components	1.2	.8	13.8	10.3
Components with increasing share . . .	1.2	1.1	14.6	12.5
Export price indexes:				
All components	2.5	1.7	4.6	26.2
Components with increasing share . . .	2.0	2.5	58.2	30.4

[1] "Absolute change" is derived by subtracting the weight of a component in the earlier year from the corresponding weight in the later year and averaging the difference with no regard to sign.

[2] "Relative change" is derived by dividing the smaller of the two weights compared into the larger, subtracting one from the ratio, and averaging the results.

[3] The structural patterns for 1961 and 1971 were derived by respectively projecting on the basis of price indexes the results of the 1957 and 1967 Family Expenditure Surveys. There are no available measures for 1974.

Unfortunately, data do not exist to make this comparison possible across the board as there are no estimates of family expenditure patterns for 1974.

On the other hand, the measures that do exist lend substance to the contention that the changes in the external sector recently have been substantially more than changes in the other sectors being compared.

The following conclusions were drawn from these arguments. First, recent change made the 1961 price base increasingly obsolete. Its relevance to the understanding of current developments (perhaps more pointedly, of the developments that are ahead of us) became questionable. The reasons for replacing it by a more recent base could no longer be resisted.

Secondly, the introduction of a new and more recent base was bound to modify data, particularly those data that relate to sub-aggregates. Fortunately, the complexity of the effects of changing the price base contributed to attenuate the size of revisions to the data, as some effects offset others. Nevertheless, the rebased accounts show real growth as fractionally lower and price inflation fractionally higher than the earlier data.

Finally, there is an element of inevitability in the periodic revisions to the accounts. Of course, the import of these revisions will not be uniform. During times of price stability and sustained and balanced growth, no appreciable changes will be reflected in the statistics, as they are recalculated to reflect more up-to-date patterns of behaviour and technological change. Nor is there likely to be much public interest in the statistics as they go through yet another of their periodic changes. On the other hand, when growth is sluggish and inflation rampant, economic statistics will be placed under the magnifying glass of public scrutiny and expected to provide exact indications even though the crudeness of their construction will not bear such demands. When in the course of rebasing the statistics change, and they must change in the light of the foregoing, users will challenge their validity. But the judicious use of statistics will be greatly enhanced if it is accompanied by a thorough understanding of the difficulties of the estimation procedures that underlie them.

Changes in Trade Indexes

The External Trade Division has changed the method of calculating price and volume indexes for exports and imports. Beginning with the indexes for April 1975, the weighting system used has been changed to correspond with the system used to estimate Gross National Product (GNP) at constant prices. The reference period for the trade indexes is also being changed, from 1968 = 100 to 1971 = 100. The purpose of these changes is to reduce discrepancies between the trade and GNP indexes caused by differences in the weighting systems, and to align the time references of various indexes numbers published by Statistics Canada. (See the *Canadian Statistical Review, May 1975,* p. 116.)

Before April 1975, the import and export **price** indexes were calculated using a (Laspeyres) system of fixed weights based on the 1968 pattern of trade. The **volume** index was derived by dividing (deflating) the value index by the corresponding fixed-weighted price index. This yielded a current-weighted (Paasche) volume index.

In the new indexes, fixed weights are used for the volume indexes and current weights for the price indexes. The weights for the price indexes are the trade values for the month, quarter or year to which the index refers and therefore change from period to period. The new volume indexes are derived by dividing the value indexes by the corresponding current-weighted price indexes. The resulting volume indexes are therefore weighted with fixed 1971 price weights, as are the measures of GNP components in constant 1971 prices.

The new 1971 trade indexes are based on an expanded set of price indicators selected to represent 1971 trading patterns. Individual price indicators are either commodity unit values calculated directly from the trade statistics or, particularly in the case of end products, price indexes obtained from other Canadian or foreign statistics.

Historical data for the new indexes for the years 1971 - 75 are available from the External Trade Division on request. An explanation of the methodology used to construct the new indexes and an analysis of the impact of the changes will be published in the near future.

Readers wishing more information on the new trade indexes may contact H.L.S. Glouchkow, Chief, Trade Measures Section, External Trade Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0V5 (613-992-0514).

Salaries of Hospital Nurses

The median annual salary of registered nurses in Canadian public general hospitals was $7,440 in 1972 and increased to $8,688 by 1974. British Columbia nurses had the highest median salary in 1974 ($11,016) and those from Prince Edward Island had the lowest ($7,104).

Data on nurses' salaries, by academic qualifications and duties, for 1972 and 1974 are published in *Annual Salaries of Hospital Nursing Personnel, 1974* (Catalogue 83-401) compiled by the Statistics Canada Health Division.

Copies of the report are available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6. Price: $1.40

Summary of Fisheries Statistics

Data for the three main Canadian fisheries areas – Atlantic, Pacific and Inland – have been summarized in a recent Statistics Canada publication. Included is information on quantities and value of fish landings by species for 1972 and 1973, the number of craft engaged in fishing as well as the employment in the fishing industry.

Copies of *Fisheries Statistics of Canada, Canada Summary, 1973* Catalogue 24-201, Annual, may be ordered from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6. Price: 70 cents

New Construction Trade Data Available

Preliminary 1973 data were recently compiled and are now available for the construction trade contractors and sub-contractors group (Standard Industrial Classification group 421). These data are based on a new and comprehensive delineation of sub-industry groups, and are the first of their type to be published.

The sub-industry groups, along with selected operating information (profit and loss statement) for each, are outlined in the accompanying table. Survey results now available from the Construction Division also include financial information (balance sheet); labour data, such as manhours worked, degree of unionization and number of salaried employees; and various other operational and organizational characteristics, including types of construction performed by province and size group, new and repair work, etc.

It should be noted that data for the Mechanical and Electrical trade groups are based on census measures, while information for other trade contractors and sub-contractors is based on a sample of these sub-industry groups only.

More extensive information on the Mechanical and Electrical trade groups is published in the *Mechanical Contracting Industry* (Catalogue 64-204), the *Electrical Contracting Industry* (Catalogue 64-205). Selected information on other trade contractors and sub-contractors will be published at a later date.

For further information, contact Ted Hewitt, Construction Division, Statistics Canada, Ottawa, Ontario, K1A 0Z6 (613-994-9756).

Cette revue est disponible en édition française. Revue Statistique du Canada n° 11-003F au catalogue.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. Annual figures are also available from CANSIM, more information can be found in the *CANSIM Summary Reference Index* and the *CANSIM Series Directory.*

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

. .	figures not available.
. . .	figures not appropriate or not applicable.
- -	amount too small to be expressed.
–	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

Statistics Canada should be credited when republishing all or any part of this document.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS

Second Quarter 1975 – Advance Information

Introductory Review

Second quarter Gross National Product, seasonally adjusted at annual rates, was $150.3 billion, up 2.6 per cent from the first quarter. This increase was primarily the result of a moderate rise in personal expenditure and a considerable improvement in the balance of foreign trade in goods and services, which reflects a substantial decline in imports. At the same time, a comparatively strong increase in spending at all levels of government, together with decreased tax collections, resulted in a record deficit. After allowing for the effect of price increases, GNP in volume terms grew by 0.3 per cent, an extremely modest increase but nevertheless sufficient to make this the first quarter of perceptible real growth in over a year. While most major spending aggregates were not particularly strong, as evidenced by the fact that final domestic demand in real terms increased by 0.4 per cent compared with 1.3 per cent in the first quarter, the rise in real GNP probably indicates that mid-1975 will mark the turning point of the current recession. This impression is strengthened by the fact that the quarter saw substantial inventory liquidation, an increase in new orders for durable goods, and an increase in the volume of investment in residential construction, the latter being an historically important sector during the early phase of recovery.

Consumer Outlays

Personal expenditure on consumer goods and services grew by 2.5 per cent to a level of $88.5 billion during the second quarter. Spending on non-durable goods was the strongest component of personal consumption and rose to $30.0 billion, an increase of 3.8 per cent from the first three months of the year, while expenditure on services grew by 1.7 per cent compared with 3.5 per cent in the first quarter. The increase in consumption was accompanied by a further moderation in the rate of price change, as the increase in the implicit price index for personal expenditure slowed to 2.0 per cent from 2.3 per cent in the revised first quarter and 3.6 per cent in the fourth quarter of 1974.

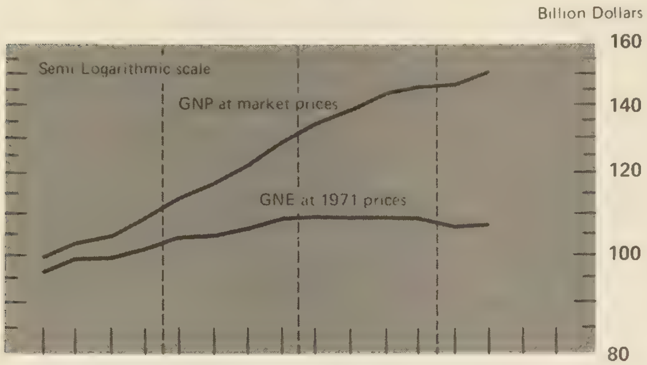
Fixed Capital Formation

Total gross fixed capital formation weakened somewhat in the second quarter, growing fractionally in real terms after an increase of 1.6 per cent in the first. A decline of 0.7 per cent in real business investment in plant and equipment was responsible for this weakness; business machinery and equipment investment declined by 1.8 per cent following a strong first quarter rise of 5.6 per cent, while business non-residential construction increased by 0.6 per cent. This produced a first-half growth rate in non-residential construction insufficient to meet the level anticipated on the basis of the mid-year survey of investment intentions. Investment in residential construction increased by 1.6 per cent in constant dollars, but as this was preceded by three consecutive quarters of strong declines, the second quarter level was over 24 per cent lower than that of a year earlier.

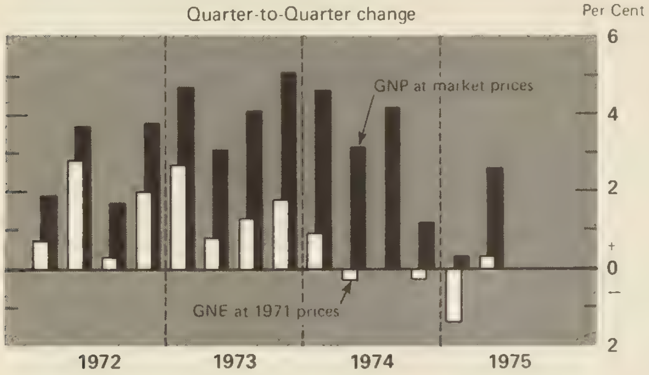
Inventory Investment

The value of the physical change in inventories swung from an accumulation of $872 million in the first quarter to a decumulation of $840 million in the second, of which $652 million or about three quarters occurred in non-farm inventories. While wholesale and retail trade combined showed some accumulation, manufacturing inventories fell by $624 million; although the manufacturing stock to shipments ratio was reduced slightly it remained above the average of the past few years, suggesting the possibility of further liquidation in the third quarter.

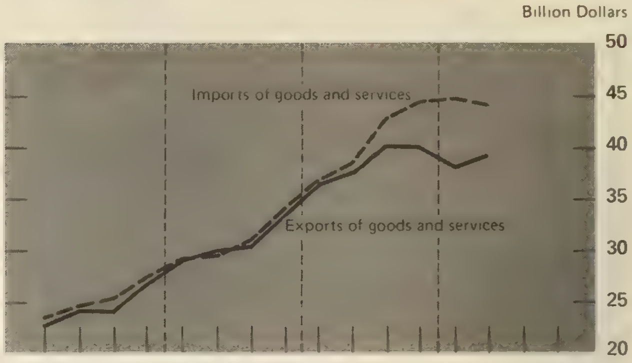
Second quarter Goss National Product, seasonally adjusted at annual rates, was $150.3 billion, up 2.6 per cent from the first quarter. After allowing for price increases, GNP in volume terms grew by 0.3 per cent.



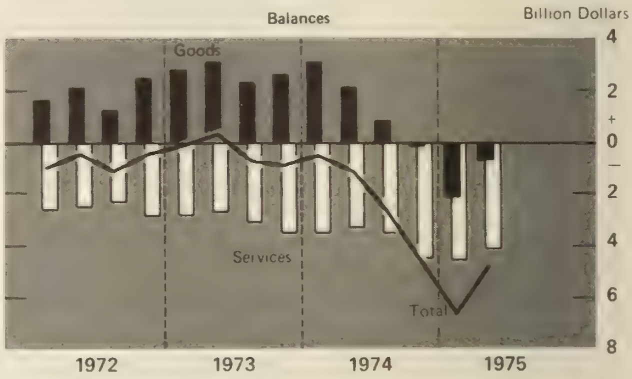
Quarter-to-Quarter change



The record deficit experienced last quarter was improved considerably by a 1.8 per cent decrease in imports and a simultaneous 2.7 per cent increase in exports, leaving on balance a deficit of $4.8 billion compared with $6.6 billion last quarter.

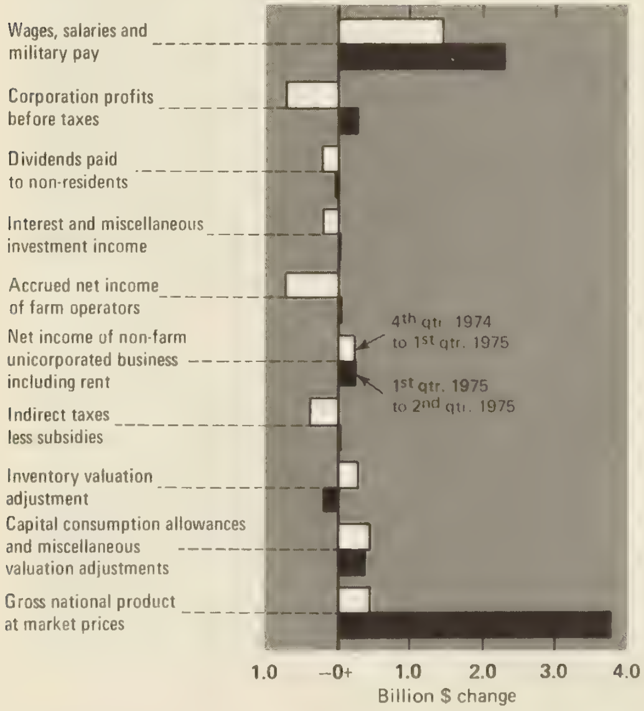


Balances



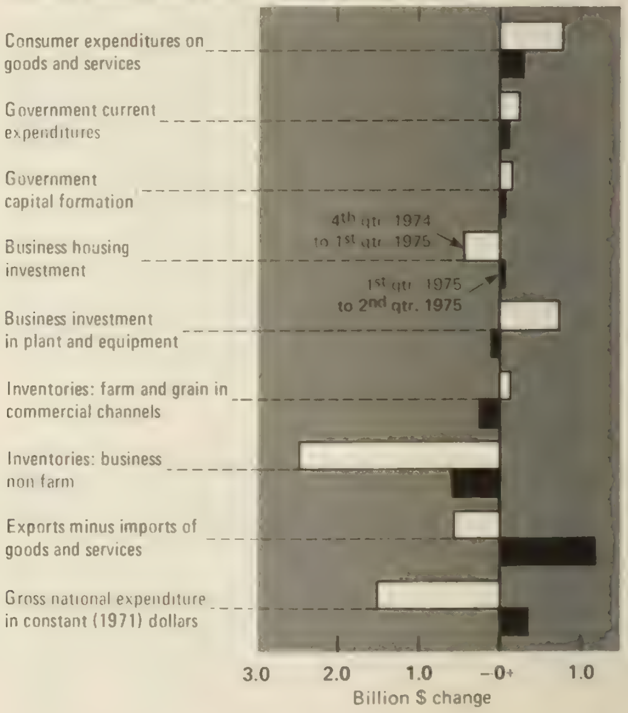
Reversing the pattern of the previous two quarters, corporation profits before taxes increased by 1.7 per cent; labour income recovered from a weak first quarter and grew by 2.8 per cent.

Quarterly changes in GNP and components



The quarter featured a moderate rise in personal expenditure, substantial inventory liquidation, considerable gains in net exports, and after three consecutive quarters of considerable decline an increase in residential construction.

Quarterly changes in GNE and components in constant (1971) dollars



All quarterly data adjusted for seasonal variation and at annual rates.

The Government Sector

Total government expenditures, excluding inter-government transfers, grew by 3.1 per cent during the second quarter, reflecting a 4.0 per cent increase in expenditure on goods and services and a 4.2 per cent increase in transfer payments to persons. Irregularly low personal income tax collections, caused in part by unusually high refunds, and a decrease in indirect tax collections caused a 3.8 per cent decline in government revenue, with the result that the combined deficit of all levels of government, seasonally adjusted and on a National Accounts basis, reached a record $6.0 billion, or about 4 per cent of GNP. The majority of this, $5.3 billion, was at the federal level, and of this, nearly one-half resulted from the oil import subsidy program and the operations of the Unemployment Insurance Commission. While government revenue will undoubtedly recover in the third quarter and reduce this deficit, changes in tax legislation will continue to affect revenue and a large deficit is expected to persist in the third quarter.

The External Sector

The record deficit on foreign trade in goods and services experienced last quarter was improved somewhat by a 1.8 per cent decrease in imports and a simultaneous 2.7 per cent increase in exports, leaving on balance a deficit of $4.8 billion compared with $6.6 billion last quarter. This movement contributed about one-half of the growth in current dollar GNP, and in constant dollars, the change in the trade balance was over three times the change in GNP. Most of the improvement occurred in exports of merchandise, particularly passenger cars and motor vehicle parts, which may reflect improving business conditions in the United States.

Incomes

Reversing the pattern of the previous two quarters, corporation profits before taxes increased by 1.7 per cent in the second quarter to a level of $17.0 billion; at the same time, wages, salaries and supplementary labour income recovered from a weak first quarter and grew by 2.8 per cent to $84.9 billion. A rise in average earnings, rather than increased employment, caused most of the increase in labour income.

Price Movements

The overall implicit price deflator for Gross National Expenditure increased by 2.3 per cent in the second quarter, compared with 1.7 per cent in the first and 3.5 per cent in the second quarter 1974. While the rate of increase in the implicit deflator for personal expenditure moderated for the second consecutive quarter, the increase in the government expenditure deflator accelerated from 0.6 per cent in the first quarter to 3.3 per cent in the second as a result of large wage settlements. There was also an increase in the rate of change in the deflator for gross fixed capital formation to 2.6 per cent from 2.0 per cent last quarter, due mainly to a 2.8 per cent increase in the non-residential construction deflator. In the foreign sector, import prices increased by 1.8 per cent compared with 3.6 per cent in the first quarter, while the implicit deflator for exports increased by 2.0 per cent.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1. 9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i. e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

See footnotes, Table 3.

*In addition to the selected Labour Force information published here, there are approximately 2,100 Labour Force series available on CANSIM. The series provide basic labour force characteristics, by geographic area, age, sex and marital status.

Table 4: selected series by sex and main age group (thousands of persons)

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. **Source: Quarterly Report on Job Vacancies (71-002), Statistics Canada.**

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

Table 9: employment indexes,[1] by industrial division (1961= 100), based on the 1960 standard industrial classification

year and month	industrial composite[2]	forestry	mining, including milling	manufacturing			construction	transportation, communication and other utilities[3]	trade			finance, insurance and real estate	service[4]
				total	non-durable goods	durable goods			total	wholesale	retail

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

Table 11: employment indexes,[1] by manufacturing industry[2] (1961 = 100), based on the 1960 standard industrial classification

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 for Quebec City and Thunder Bay), those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. [2] The previous supplementary classification has been revised. Historical series relating to the revised classification replace the previously published supplementary indexes. [3] Includes constant weighted food component. [4] These rounded weights, provided as a general guide, show the relative importance of the major components of the C. P. I., on average, during the year 1974. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

annual average and month	total shipments	non-durable	durable	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), Statistics Canada.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments** (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

[1] In 1975, approximately 1,600 municipalities are being surveyed. [2] This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators. **Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Quarterly Shipments of Flush Type Doors (wood) by Canadian Manufacturers (35-004), Hardboard (36-001), Rigid Insulation Board (36-002), Particle Board (36-003), Primary Iron and Steel (41-001), Stoves and Furnaces (41-005), Steel Wire and Specified Wire Products (41-006), Domestic Refrigerators and Freezers (43-001), Cement (44-001), Concrete Products (44-002), Gypsum Products (44-003), Mineral Wool (44-004), Products made from Canadian Clay (44-005), Asphalt Roofing (45-001), Sales of Paints, Varnishes, and Lacquers (46-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when their current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1972 and 1973 price indexes are subject to revision. [3] 1973 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit.

[2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges.

[3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges.

[4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges.

[5] Includes bank-sponsored credit card balances.

[6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form.

[7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies.

[8] Bills due for non-commercial use of telephones, gas and electric power.

[9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

year and month	total railway revenue freight loadings (carload and non-carload) ('000 tons)		total revenue cars loaded (carload only)	farm products and food						mine products			
	unadj.	S.A.		wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash	coal, sand, cement and other mine products

---

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada Aviation Statistics Centre (51-004) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Figures are rounded and may not add to totals shown.

[1] For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1973-74. **Source: The Canada Gazette.**

Standard Geographical Classification

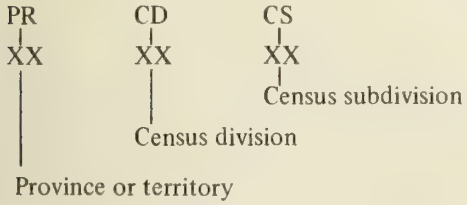
Standardization in the gathering and processing of statistics is an essential co-ordination factor towards the rational use of statistics.

The *Standard Geographical Classification* is one of a number of standard classifications published by Statistics Canada. For the first time, it has been made available to the public in response to the needs of an increasing number of users to facilitate statistical comparisons for given areas.

The basic standards used for the development of the geographical code are the units already established for the various censuses, i.e. municipalities and counties or their equivalent.

Moreover, in order that the structure of the basic code be articulated in a sufficiently flexible manner and allow for use at different levels of aggregation, a three level hierarchy has been devised, with each level being represented by two digits. The basic code for a given location is, therefore, composed of six digits. The highest hierarchical level is the province or territory, followed by the census division and finally by the census subdivisions.

Standard Geographical Classification Basic Code Structure



– X represents a digit.

The *Standard Geographical Classification* is presented in four volumes. Volume I, *The Classification* gives detailed explanations of the concepts used for the design and articulation of the code; geographical units by province are presented in tables according to census divisions and subdivisions and a set of reference maps showing all such units is featured.

Volume II, the *Numerical Index* lists all the names of geographical units included in the classification, in numerical order and according to the structure of the code; Volume III, the *Alphabetical Index,* contains the same information in alphabetical order, while Volume IV, the *Alphabetical Index by Province,* lists this information alphabetically but by province and territory.

Readers wishing to obtain more information can do so by contacting the Standards Division, R.H. Coats Building, Tunney's Pasture, Statistics Canada, Ottawa, Ontario K1A 0T6.

Standard Geographical Classification is available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa K1A 0T6.

Canadian Selective Dissemination of Information

Have you ever stopped to consider the number of hours or days you spend, sometimes to no avail, in looking for the required information for a lecture, a meeting, a course, a special study? Did you ever wonder about the number of persons who have given up the thought of ever catching up with the publications related to their field of study or their work? Indeed, the number of works published daily is such that any person determined to browse through all literature of likely interest is engaging in a lost battle.

But in this century of rampant information a solution has been found. The National Library of Canada operates a computerized information retrieval system which regularly scans thousands of publications, searching for all items of interest to its subscribers.

This system which has operated with increasing success since 1969 is called CAN/SDI (Canadian Selective Dissemination of Information).

The Library subscribes to a number of data bases on magnetic tape processing a considerable number of works of all kinds and particularly periodicals. In an entirely automated manner, CAN/SDI chooses the information best suited to the interest profile defined by each subscriber and sends the latter printouts of references that are relevant to his/her own specific subject or field of research.

The subject-matter covered by CAN/SDI includes a very large number of disciplines ranging from social sciences to chemistry and biology. Economics and statistics are also well represented: They are featured in the catalogue of several CAN/SDI data bases, including the SSCI (Social Sciences Citation Index) published by the Institute for Scientific Information. Thus, the access to a large number of specific studies published in economical and statistical journals throughout the world is rendered possible.

For more information on the CAN/SDI network and the personalized help it can offer you, contact the Selective Dissemination of Information Division, National Library of Canada, 395 Wellington Street, Ottawa, Ontario, K1A 0NA.

Handbook Canada 1975

The annual handbook, *Canada 1975,* has just been published. Although its size and format remain essentially the same as those of the previous years, the content has once more been renewed and updated in view of the latest social, political and economical developments, and new features have been added, inspired from subjects of current interest such as the "Status of Women". Also, the approach to geography history, religion and culture has been entirely redefined thanks to the co-operation of prominent scientists.

Carefully selected photographs adorn this publication and render its reading both pleasant and interesting.

Canada 1975 is available from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, K1A 0T6.

Special Survey on Motor Vehicle Thefts

The Judicial Division of Statistics Canada has just published the results of its 1974 survey on **motor vehicle thefts in Canada.** The data collected on the number of offences and the conditions surrounding them will allow for comparability with a similar survey conducted in the United States for the same time frame.

The reference period for the first survey of this kind conducted by Statistics Canada in 1963 was the month of May. For 1974, September and October were selected since, according to trends in the regular monthly crime reports submitted by the police, these are the months in which motor vehicle theft activity peaks. The field of observation will thus be more significant.

An effort was made to collect data on subjects which were not dealt with in 1963, and particularly the methods of attack, the most auspicious moments and circumstances, the anti-theft devices of the stolen vehicles and the delinquency/criminal history of persons charged.

The survey was conducted in response to an increasingly serious need expressed by the Canadian Association of Chiefs of Police: the annual number of thefts has increased in ten years from 37,255 to 71,591, a considerable increase, not only in terms of total number of offences, but also in terms of rate of thefts per motor vehicles registered. More than ever, statistical data can supply the basic information for setting up prevention programmes as well as improving search and inquest methods.

In fact, the results of this survey may give interesting material to persons in various fields ranging from sociology to automobile manufacturing and insurance companies.

Motor Vehicle Thefts in Canada (Catalogue 85-504) may be obtained from Publications Distribution, Statistics Canada, Tunney's Pasture, Ottawa, K1A 0T6.

National Income and Expenditure Accounts – *(Continued from page 7)*

TABLE 1. National Income and Gross National Product, by Quarters, 1974 and 1975

Seasonally adjusted at annual rates

	1974					1975	
	I	II	III	IV	Year	I	II
	millions of dollars						
Wages, salaries and supplementary labour income	71,220	73,584	77,948	81,128	75,970	82,540	84,852
Military pay and allowances	1,148	1,172	1,192	1,228	1,185	1,280	1,268
Corporation profits before taxes[1]	17,792	18,712	19,276	17,432	18,303	16,696	16,980
Deduct: Dividends paid to non-residents[2]	- 1,404	- 1,432	- 1,464	- 1,724	- 1,506	- 1,512	- 1,468
Interest, and miscellaneous investment income[3]	6,344	6,868	7,220	7,624	7,014	7,424	7,452
Accrued net income of farm operators from farm production[4]	3,340	3,944	3,724	3,928	3,734	3,204	3,236
Net income of non-farm unincorporated business including rent[5]	7,252	7,364	7,444	7,320	7,345	7,552	7,788
Inventory valuation adjustment[6]	- 3,804	- 5,456	- 4,440	- 3,356	- 4,264	- 3,064	- 3,260
Net National Income at factor cost	**101,888**	**104,756**	**110,900**	**113,580**	**107,781**	**114,120**	**116,848**
Indirect taxes less subsidies	17,864	18,640	18,232	17,116	17,963	16,708	16,752
Capital consumption allowances and miscellaneous valuation adjustments	14,620	15,176	15,596	16,024	15,354	16,488	16,872
Residual error of estimate	- 32	20	- 284	- 576	- 218	- 740	- 128
Gross National Product at market prices	**134,340**	**138,592**	**144,444**	**146,144**	**140,880**	**146,576**	**150,344**
Gross National Product at market prices excluding accrued net income of farm operators	**131,000**	**134,648**	**140,720**	**142,216**	**137,146**	**143,372**	**147,108**

[1] Excludes profits of government business enterprises.

[2] Includes the withholding tax applicable to this item.

[3] Includes profits (net of losses) of government business enterprises and other government investment income.

[4] Includes an arbitrary smoothing of crop production, and standard seasonal adjustment for withdrawals of grain from farm stocks and for the changes in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.

[5] Includes net income of independent professional practitioners.

[6] See footnote 4, of Table 2.

TABLE 2. Gross National Expenditure, by Quarters, 1974 and 1975

Seasonally adjusted at annual rates

	1974					1975	
	I	II	III	IV	Year	I	II
	millions of dollars						
Personal expenditure on consumer goods and services	75,828	78,664	81,740	83,408	79,910	86,360	88,516
Government current expenditure on goods and services[1]	25,100	26,788	28,384	29,224	27,374	29,728	30,856
Gross fixed capital formation	31,472	32,476	33,428	34,224	32,900	35,508	36,468
Government[2]	4,808	5,156	5,584	5,844	5,348	6,092	6,352
Residential construction	28	28	20	24	25	24	32
Non-residential construction	4,116	4,424	4,780	4,980	4,575	5,180	5,412
Machinery and equipment	664	704	784	840	748	888	908
Business[3]	26,664	27,320	27,844	28,380	27,552	29,416	30,116
Residential construction	7,656	8,096	7,668	7,164	7,646	6,820	7,092
Non-residential construction	8,560	8,696	9,020	9,660	8,984	10,140	10,492
Machinery and equipment	10,448	10,528	11,156	11,556	10,922	12,456	12,532
Value of physical change in inventories	2,344	1,812	3,288	3,216	2,665	872	- 840
Government	- 20	24	40	60	26	- 20	32
Business:							
Non-farm[4]	3,156	1,776	2,440	3,304	2,669	692	- 652
Farm and grain in commercial channels[5]	- 792	12	808	- 148	- 30	200	- 220
Exports of goods and services	36,328	37,480	40,120	40,024	38,488	38,256	39,300
Deduct: Imports of goods and services	- 36,764	- 38,608	- 42,804	- 44,524	- 40,675	- 44,888	- 44,088
Residual error of estimate	32	- 20	288	572	218	740	132
Gross National Expenditure at market prices	**134,340**	**138,592**	**144,444**	**146,144**	**140,880**	**146,576**	**150,344**
Final domestic demand	132,400	137,928	143,552	146,856	140,184	151,596	155,840
Detail of farm inventories and grain in commercial channels:							
Value of crop production and depletions of farm stocks of grain	- 676	652	- 96	- 164	- 397	376	676
Change in other farm-held inventories	- 40	308	532	160	240	- 80	- 208
Grain in commercial channels	- 76	356	372	- 144	127	- 96	- 688

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication *National Income and Expenditure Accounts*, Catalogue 13-001.

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.

[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one-fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

TABLE 3. Gross National Expenditure in Constant (1971) Dollars, by Quarters, 1974 and 1975[1]

Seasonally adjusted at annual rates

	1974					1975	
	I	II	III	IV	Year	I	II
	millions of dollars						
Personal expenditure on consumer goods and services	64,720	65,108	65,720	64,732	65,070	65,492	65,792
Durable goods	10,892	11,064	11,056	9,976	10,747	10,424	10,580

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française. Revue Statistique du Canada n^o 11-003F au catalogue.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. Annual figures are also available from CANSIM, more information can be found in the *CANSIM Summary Reference Index* and the *CANSIM Series Directory*. Both the documents are available directly from CANSIM staff.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

.. figures not available.

... figures not appropriate or not applicable.

-- amount too small to be expressed.

– nil or zero.

† advance estimates.

c correction

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

MCD months for cyclical dominance (see above).

NOTE TO USERS

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 3, Table 3.1 – Financial Flows

The most recent quarter of data will no longer appear on page 36 and 37 each month. Instead it will be reported at the end of the publication.

Section 5, Table 4 – Consumer Price Index

With this issue these indexes have been time-rebased from 1961 = 100 and 1969 = 100 to 1971 = 100. Further information can be obtained from Prices Division, Statistics Canada.

Annual Supplement to the Canadian Statistical Review – 1974

The Annual Supplement for 1974 is now available. It contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series of Section I of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available (Bilingual).

This document (Catalogue 11-206) may be ordered from Publications Distribution, Statistics Canada. Free to *Canadian Statistical Review* subscribers.

CONVERSION OF THE CANADIAN GRAIN INDUSTRY TO THE METRIC SYSTEM

E.E. Baxter*

Background

The Canadian grain industry will convert to the metric system on February 1, 1977. The conversion operation is being planned and co-ordinated by a special committee of the Canada Grains Council. The committee's area of interest extends from the initial producer delivery – including permit books and grain delivery quotas where they apply – through the main handling system to either export or domestic consumption. In the domestic system, the Canada Grains Council and the conversion committee will be dealing with the conversion of the grain input for flour mills, maltsters, feed manufacturers and oil crushers. Although some of these users will have other conversion programs, the February 1977 date will be a major influence. The Council and its committee answer to the National Metric Commission in a broad sense but because of the early date, the plans and procedures are largely of Council design.

The areas of greatest concern to agricultural statisticians are:

- the conversion of historical statistics
- the transition period of dual statistics (imperial and metric)
- statistical reporting procedures and forms.

Current Situation

There are several committees and organizations involved in the preparation for conversion. Some of these and their activities in the areas of statistics and forms are listed here.

Committees

(a) **Canada Grains Council Metric Conversion Committee**

This committee is responsible for overall co-ordination.

(b) **Special Interest Group of the Grain Industry**

This group is undertaking research and planning to convert records, documents and information systems within the industry to metric units. Emphasis is on converting the accounting and EDP systems.

(c) **Canadian Grain Commission Internal Metric Committee**

The CGC Committee is analyzing changes required to reporting forms when metric changeover occurs. (More important to the overall conversion process, the Grain Commission will be supervising the conversion of scales.)

(d) **Canadian Wheat Board Internal Metric Committee**

This group is also investigating the internal changes which will be necessary for the Canadian Wheat Board.

Other Organizations

(a) **Canadian Grain Commission, Economics and Statistics Division**

The Division has published several statistical reports and documents, produced by computer, with both pounds, or bushels, and metric tonnes on them

---

* Mr. E.E. Baxter, Executive Director of the Canadian Grain Commission, is now also serving as Chairman of the Canada Grains Council Metric Conversion Committee. This article is taken from a speech made by Mr. Baxter to the Federal-Provincial Committee on Agricultural Statistics, Ottawa, March 11, 1975.

(Daily Traffic Reports – Thunder Bay and Vancouver, and Canadian Grain Commission certificates). In addition, the last three issues of the annual publications, *Exports of Canadian Grain* and *Visible Grain Supplies and Disposition,* (as well as all the annual statements) have been converted to metric units in separate metric editions. Exports statistics have been converted to the metric system as far back as the 1946 - 47 crop year.

(b) **Canadian Wheat Board Market Co-ordination**

The statistical appendices to the CWB annual reports have been converted to metric units back to 1949 - 50.

(c) **Statistics Canada**

The bureau is now in the process of updating its handbook on Field Crops[1] and converting to metric units. It will be a dual publication, one column in imperial units, the next in metric units.

(d) **Provincial Agricultural Statistical Offices**

Several have published their most recent yearbooks with some tables in both imperial and metric units. The most comprehensive such yearbook was from the Manitoba Department of Agriculture in which all tables in imperial units were also printed in metric units.

In general, the committees involved in metric conversion do not overlap in their activities because of the co-ordination of the Grains Council and because of the fact that several committee members sit on more than one committee.

However, in the area of conversion of statistics and forms, so far there has been little co-ordination and there has been some duplication of effort as the summary of the progress to date has probably indicated.

One illustration is in the conversion of historical statistics. Most of the organizations mentioned have converted several historical statistics (many of them the same ones) to metric units, but no standard procedures or conversion rates have been adopted. For example, the Economics and Statistics Division of the Canadian Grain Commission converted several publications using conversion rates of 5 digits. However, when converting figures of hundreds of millions of bushels, inaccuracies arose (the errors were less than 1/1000 of 1 per cent) so they are now using an 8-digit conversion rate (confirmed by the Metric Commission).

Another example is the experience of the Market Co-ordination Group of the Canadian Wheat Board. This group used an 8-digit conversion rate to convert more than 20 years of historical statistics. However the rate was slightly wrong. They used 1 tonne=2,204.6223 pounds rather than the accepted rate of 1 tonne=2,204.6226 pounds.

Some Questions to be Settled in Converting Historical Statistics

These examples show that there are some questions to be settled before proceeding with a full-scale conversion of all the historical statistics to metric units.

(a) What are the correct conversion rates and conversion procedures?

(b) How many significant digits are necessary? This is especially pertinent with production and farm stock figures which are generally in thousands or millions of bushels. For example, to say that 600,000,000 bushels = 16,329,196 metric tonnes would make the metric conversion seem more accurate than the original bushel estimate.

(c) Should imperial and metric statistics appear in the same or separate publications?

(d) What units to use? How to spell them (for example, tonne)?

(e) Who will convert which statistics?

These questions should be resolved soon, but the big question is "by whom"? (My feeling is that either the Grains Council Metric Conversion Committee or Statistics Canada should take on the responsibility of establishing a committee and/or co-ordinator to resolve these questions and serve as a central co-ordinator and authority to reduce the confusion and duplication of effort in this area.)

Reporting Procedures and Forms

Of ultimately greater concern, of course, are the reporting procedures and forms to be used after conversion takes place. This problem should be the simplest for the Canadian Grain Commission as its reports come from the licensed elevator system. These respondents will be quite familiar with the metric system since their scales and internal accounting system will be in metric units. Neither is the problem of converting the Commission's statistical reporting forms foreseen as being a formidable task. In most cases, it will involve simply changing column headings, although, of course, some redesigning of forms will be necessary.

The problems of the statistical agencies who receive information directly from farmers will certainly be more difficult because farmers, at first, will be less familiar with metric units. Here, I am thinking of surveys such as Statistics Canada's semi-annual agricultural surveys and the crop reporting surveys in which questionnaires are sent directly to farmers. However, we should not under-estimate the speed with which farmers will be able to make the switch to metric units for they will soon start to think metric when they start getting paid by the tonne.

---

[1] *Handbook of Agricultural Statistics, Part I – Field Crops,* Catalogue 21-507, Occasional, 1975, Statistics Canada, Ottawa.

It would seem that there will be three alternatives regarding statistical questionnaires on grain that are sent to farmers.

(1) The questionnaires could ask for imperial units only and the conversion could be done in Ottawa or wherever the data is processed.

(2) The questionnaires could have spaces for both the imperial and the metric units and could ask for one or the other or both, similar to some farm survey questionnaires currently used in Quebec, where crop area may be reported in either acres or arpents.

(3) The surveys could ask for metric units only.

Eventually, of course, the third alternative will have to be used.

There are two complications to the farm questionnaires. First, the farmer will have to start thinking in hectares as well as tonnes (or will he?) whereas most of the industry will not be concerned with the measurement of land area.

The second problem is especially pertinent to yield and farm stock estimates. Farmers now tend to think in volume bushels and not weighted bushels. This is to be expected as farmers don't know the weight of the grain until it is delivered to an elevator. The capacity of a hopper or a granary is constant for all grains when measured in volume bushels.

After conversion, a farmer will have to start thinking of his standard 2,000-bushel granary as a 54-tonne granary of wheat, a 31-tonne granary of oats, and a 44-tonne granary of barley.

Of course, this will take time, but probably less time than we might expect because, as mentioned earlier, it will be to the farmer's financial advantage to think metric.

As with the question of converting historical statistics, the problem of statistical forms and reporting procedures should be discussed and resolved by some central standards authority, possibly the same one dealing with the questions of historical statistics.

I think we all realize that this planning and co-ordination will have to take place soon. Hopefully, that will be one of the recommendations of the secretariat of this conference. February 1977 is fast approaching.

Education Statistics

To mark the opening of the school year, we present a summary review of new publications from the Education Division.

Education in Canada, A Statistical Review for 1971 - 72 and 1972 - 73

Statistics on all levels of Canadian education for 1971 - 72 and 1972 - 73 have been assembled in the second annual edition of *Education in Canada.* It is designed to provide areview of major educational statistics for Canada and the provinces, which have been collected by the Education, Science and Culture Division.

Detailed 1971 - 72 and 1972 - 73 breakdowns are shown for institutions, teachers, enrolment, graduates, and expenditures. As well as basic numerical counts and cross-tabulations, data are given on topics such as teachers' salaries and qualifications, enrolment ratios and retention rates, citizenship of graduate students, field of specialization in which degrees are granted, and education expenditures in relation to other socio-economic indicators.

Retrospective summary tables display time series for the most important variables since 1960 - 61.

Education in Canada, A Statistical Review for 1971 - 72 and 1972 - 73 (Catalogue 81-229, Annual), is available from Publications Distribution, Statistics Canada.

Financial Statistics of Education, 1969 and 1970

Expenditures on education increased 289 per cent from 1950 to 1960, and 350 per cent between 1960 and 1970. The rise was greatest at the post-secondary level where amounts grew by 395 per cent during the 1950s and 810 per cent in the next decade. By 1970, the education bill totalled $7.7 billion.

As a percentage of the Gross National Product, education spending soared from 2.4 per cent in 1950 to 9.0 per cent in 1970. Education accounted for 22.2 per cent ($7 billion) of all 1970 government expenditures in Canada. This compares with 20.4 in Japan, 17.9 in the United States, and 12.8 per cent in the U.S.S.R. Canada's public expenditure of $1,058 per pupil ranked second to the United States' $1,075 during the same year.

Financial Statistics of Education, 1969 and 1970 (Catalogue 81-208, Annual), is a continuation of *Survey of Education Finance.* It provides detailed and comprehensive 1969 and 1970 data for all levels of education, and a historical review from 1950. The format has been revised, and a brief comparison with nine other countries is included.

Copies may be obtained from Publications Distribution, Statistics Canada.

Continuing Education, Elementary-Secondary, 1972 - 73

In 1972 - 73, 569,760 students enrolled in 931,746 continuing or adult education courses, almost 22,000 more students than two years earlier. However, the national participation rate at this level of instruction fell from 41.6 to 41.3 per 1,000 population over the same period. Participation was highest in British Columbia (73.2) and lowest in Newfoundland (16.5).

Registration in non-credit courses increased 26.6 per cent since 1970 - 71, while credit course registration declined 21.4 per cent. Home arts accounted for 22.4

per cent in the non-credit category, followed by fine arts and crafts (16.2 per cent), and recreation (9.7 per cent). More than 60 per cent of the credit registrations were in academic courses, grades 9 to 12; another 21.9 per cent were in business and vocational courses.

Continuing Education, Elementary-Secondary, 1972 - 73 (Catalogue 81-224), is the fourth in an annual series that presents enrolment data and commentary on school board adult education classes and correspondence study offered by the provincial Departments of Education. Tables and charts display the number of students and registrations by province and by type of course.

The report is available from Publications Distribution, Statistics Canada.

Minority and Second Language Education, Elementary and Secondary Levels

In 1970, federal-provincial agreements established two language-teaching programmes. The objectives were first to ensure that English and French Canadians have the opportunity to educate their children in their own language, and secondly to give students of the majority language group in each province the chance to learn, as a second language, the other official language. Figures and analysis of the operation of the programmes are presented in a service bulletin from the Education, Science and Culture Division – *Minority and Second Language Education, Elementary and Secondary Levels* (Catalogue 81-001, Vol. 4, No. 4).

By 1974 - 75, nearly one and a half million students in all provinces except Quebec were learning French as a second language, or about 40 per cent of those eligible to do so. More than 820,000 Quebec students were learning English – about 66 per cent of the eligible enrolment. However, proportions varied by level and by province. At the elementary level, all provinces where French is the second language recorded increases in participation rates over 1970 - 71, while decreases were significant at the secondary level.

The number studying in French outside Quebec was 184,000, which represented about 80 per cent and 70 per cent of the French population of elementary and secondary school age, respectively. In Quebec, almost 230,000 students were taught in English. This accounted for 16 per cent of Quebec's total school population, although in absolute numbers it was 25 per cent larger than the enrolment of French students in French school in all other provinces combined. The 1974 - 75 elementary participation index in the nine provinces dropped 5 points from 1970 - 71, while at the secondary level, it rose 15 points.

Tables and charts show provincial breakdowns for enrolment, participation rates and indices, level of instruction, and number of schools offering these programmes. Data are given for 1970 - 71, 1973 - 74, and 1974 - 75.

The bulletin may be obtained from Publications Distribution, Statistics Canada.

Advance Statistics of Education, 1975 - 76

Advance Statistics of Education is published annually before the start of the school year. Statistics on enrolment, teachers, institutions, degrees, and finance are given for Canada and the provinces. The ninth edition presents a time series from 1973 - 74 to 1976 - 77 for provincial figures, and to 1977 - 78 for most national figures. It contains actual data for 1973 - 74, preliminary statistics for 1974 - 75, estimates for 1975 - 76, and forecast for 1976 - 77 and 1977 - 78.

Estimates for 1975 - 76 indicate university enrolment will rise about 3.5 per cent and college enrolment 4.4 per cent, while the number of elementary and secondary students continues to decline.

University enrolment will be about 363,000 and college enrolment 220,000. The number of full-time teachers in these institutions is estimated at 47,700, up 1,300 or 2.9 per cent over 1974 - 75.

Elementary-secondary enrolment is expected to drop 1.3 per cent to 5.5 million from 5.6 million in 1974 - 75, reflecting the low birth rate of the last decade. Full-time teaching staff will be about 271,800, down 800 from 1974 - 75.

The total national expenditure for 1975 - 76 is estimated at $12.2 billion, 15.5 per cent more than a year earlier. But spending on education as a percentage of personal income and the Gross National Product has declined since 1971, despite the increased amount.

A special section outlines school-age population projections to 2001. Because enrolment is closely related to the size of the young population, changes in their numbers will affect all aspects of education. The post-war baby-boom was followed by a sharp decline in fertility and births. But even if fertility remains low, the number of births will increase when the baby-boom children reach reproductive age. The result is steep curves in the size of the three school-age population groups: 6 - 13, 14 - 17, and 18 - 24 (see Chart page 122).

Enrolment is expected to mirror these trends. By 2001, there will be a net gain over present numbers at all levels of education, but this gain will be preceded by a drastic drop. The extent of the enrolment ups and downs will differ by region and within regions. Moreover, the declines and increases will also vary by grade. This poses potential problems as the education system attempts to adapt to these changes.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1. 9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

Table 2.3: industrial production, volume indexes (1961 = 100), based on the 1960 standard industrial classification – continued

year and month		durable manufacturing															
		primary metal industries					metal fabricating (ex mach. & transportation equipment)							machinery (except electrical)	transp. equipment		
		total	iron & steel mills	steel pipe & tube mills	iron foundries	smelting and refining	total	boiler & plate works	fabricated structural metal	ornamental & architectural metal	metal stamping, pressing &coating	wire & wire products	hardware, tool & cutlery		total	aircraft and parts	motor vehicles[1]

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i. e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

See footnotes, Table 3.

*In addition to the selected Labour Force information published here, there are approximately 2,100 Labour Force series available on CANSIM. The series provide basic labour force characteristics, by geographic area, age, sex and marital status.

Table 4: selected series by sex and main age group (thousands of persons)

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. **Source: Quarterly Report on Job Vacancies (71-002), Statistics Canada.**

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

These data were revised in the December 1974 issue of the Canadian Statistical Review. See Note to Users for that month.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C.P.I., on average, during the year 1974. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

annual average and month	total shipments	non-durable	durable	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), Statistics Canada.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments** (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

---

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators. **Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. [1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when their current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and imcome. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

---

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500, 000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. [2] The data for August 1973 do not follow the pattern for the other months of 1973. The decreases in most categories are a result of the railway strike in this month. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

---

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada Aviation Statistics Centre (51-004) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Labour costs in Canada
Manufacturing, 1971

The Special Surveys Section, Labour Division of Statistics Canada and the Surveys Division, Economics and Research Branch of the Canada Department of Labour conducted a joint national survey on labour costs in Canada in the Manufacturing industry. It was the third survey of this nature, and it was based on data for the calendar year 1971; the previous survey referred to 1968.

The survey coverage was determined so as to produce data that would be compatible with the monthly Survey of Payrolls conducted by Statistics Canada and the Working Conditions Survey of the Canada Department of Labour. For this purpose, 13,000 establishments employing 20 or more persons in at least one month in the year 1971 were covered by the survey. It is estimated that 90 per cent of all employees in the Manufacturing industry are working for the larger firms covered.

This report contains information regarding the composition of the total wage package which will enable the reader to appreciate the significance of the so-called "fringe benefits". This item is a matter of major interest for those involved in collective bargaining. The opposite chart shows the composition of the total wage package for all employees in Manufacturing industry.

The data also show the differences in the composition and the value of labour costs for both categories of workers in Manufacturing industry: salaried employees comprise managerial, professional and clerical workers; wage-earners are other employees such as production, maintenance, shipping and warehousing staffs. Some tables detail the labour costs by province and by type of establishment. Elsewhere, the results of the 1971 survey are summarized with those of 1968.

For those interested in the significance of labour costs in areas other than the manufacturing industries, the series *Labour costs in Canada* comprises reports on other industries.

To obtain a copy of *Labour costs in Canada, Manufacturing, 1971* (Catalogue 72-612), please contact Publications Distribution, Statistics Canada.

Tuberculosis statistics
Institutional Facilities, Services and Finance, 1973

Modern methods for the treatment of tuberculosis require less hospital care than in the past and as a result fewer beds. This is clearly shown by data presented in the publication *Tuberculosis Statistics*, prepared by the Hospitals Section, Health Division, Statistics Canada. The results published here refer to the year 1973 and allow comparisons with previous years.

The number of tuberculosis institutions decreased by 14 per cent from 22 in 1972 to 19 in 1973; however, the percentage occupancy based on rated bed capacity was only 57.6 per cent in 1972.

Despite the price increases for medical services and facilities, the 1973 operating expenses of reporting public sanatoria represented 80 per cent of the total reported for 1972.

In the following table, the distribution of operating expenses for 1973 are compared with the corresponding figures for 1972.

Operating Expense, by Services, Public Sanatoria, Canada, 1972 - 1973

Service	1972		1973	
	Total amount	Percentage	Total amount	Percentage
Nursing services	3,799,663	28.7	2,878,172	27.3
Special services	1,907,097	14.4	1,589,228	15.1
Educational services	149,344	1.1	139,069	1.3
General services	6,907,107	52.2	5,417,766	51.4
All services	**12,763,211**	**96.4**	**10,024,235**	**95.1**
Medical and surgical supplies and drugs	470,810	3.6	496,751	4.7
Other			23,971[1]	0.2
All expenditures	**13,234,021**	**100.0**	**10,544,957**	**100.0**

Air passenger origin and destination *Canada - United-States Report, 1974*

This large annual report recently released is made possible as a result of an agreement between Canada and the United States to exchange data from their respective surveys on the origin and destination (O & D statistics) of air passengers who come from a U.S. or a Canadian city and cross the border either inbound or outbound.

The scheduled carriers participating in the Canadian survey were: Air Canada, C.P. Air, Eastern Provincial Airways, Nordair, Pacific Western Airlines, Québecair and Transair. All certified air carriers except helicopters and intra-Alaskan carriers were participants in the U.S. survey.

The itineraries of the return trips are broken into single direction components, as a rule at the farthest point from the origin. Thus, for an itinerary Montreal - Chicago - Denver - Los Angeles - Toronto - Montreal, the portions Montreal - Los Angeles and Los Angeles - Montreal will be used. If a portion of a trip is outside U.S. and Canada, the last point of origin or destination on Canadian or U.S. territory is used. The Appendix provides tables of statistical data on the transborder portions of international itineraries.

Origin and destination statistics, although they do not take into account potential stopovers during the journey are used extensively by airlines, airports, manufacturers of aircraft and aircraft engines, consultants and research organizations, chambers of commerce, hotels, travel organizations, government aviation authorities and other government departments and agencies. Such organizations make use of O & D statistics for: route planning and development, general economic analyses in air transportation including forecasting, airport planning, sales administration and travel promotion, schedule planning, airline investment analyses, development of new aircraft engine designs, airways planning and studies in tourism and travel.

Furthermore the O & D statistics in this report may be used to indicate the relative community of interest between Canadian and United States centres.

For a copy of *Air passenger origin and destination, Canada - United States Report, 1974,* (Catalogue 51-205), please contact Publications Distribution, Statistics Canada.

Appointment

Mr. Stuart Wells, formerly Associate Director General of the System of National Accounts (Current) has been appointed Director General of this branch.

Mr. S. Wells taught at Brock University, prior to joining Statistics Canada as Director of the Econometrics Research Division.

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française. Revue Statistique du Canada nº 11-003F au catalogue.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. Annual figures are also available from CANSIM, more information can be found in the *CANSIM Summary Reference Index* and the *CANSIM Series Directory*. Both the documents are available directly from CANSIM staff.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

. .	figures not available.
. . .	figures not appropriate or not applicable.
- -	amount too small to be expressed.
–	nil or zero.
†	advance estimates.
c	correction
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

Statistics Canada should be credited when republishing all or any part of this document.

THE USE OF INDIVIDUAL INCOME TAX RETURNS IN MEASURING INCOME OF FARMERS

R.B. Proud*

The following article is a description of the methods used to determine income information from farm tax returns, with some examples of the data obtained. As background, the article begins with a brief outline of the Canadian taxation system and a commentary on the development of agricultural statistics.

The Canadian Income Tax System

The Government of Canada first imposed an income tax in 1917 under the **Income War Tax Act**. With many amendments, this act continued in force until the **Income Tax Act** came into being in 1948. The next major change in the Canadian income tax system resulted from implementation of sections in the **White Paper on Tax Reform** released in November 1969 and incorporated into the Budget on June 18, 1971.

In addition to taxes levied by the Government of Canada, all provinces levy personal income taxes and corporation taxes. In general, income tax is imposed on the taxable income of all persons resident or normally resident in Canada. Taxable income is typically made up of almost all a person's receipts within the calendar year in question. The four main sources of taxable income are: (1) income from employment, (2) income from business or property, (3) capital gains, and (4) other sources of income.

Under the revised **Statistics Act** which became law in February 1971, Statistics Canada is authorized to have access to income tax returns and to tabulate information from such returns. Subsection (1) of section 23 states:

> "(a) the Chief Statistician or any person authorized by him to do so may inspect and have access to any returns, certificates, statements, documents, or other records obtained on behalf of the Minister of National Revenue for the purpose of the Income Tax Act; and
>
> (b) The Minister of National Revenue shall cause such returns, certificates, statements, documents, or other records to be made available to the Chief Statistician or person authorized by him to inspect such records, in such manner and at such times as the Governor in Council may prescribe upon the recommendation of the Minister and the Minister of National Revenue."

All income tax data is subject to the same rules of secrecy and confidentiality as all other information gathered by Statistics Canada. Access to tax returns has created a new and extremely valuable source of information, and considerable effort has been devoted to obtaining economic and other information from the returns of those recording farm income. It is this aspect of the use of income tax information that is discussed in the rest of this article.

Farm Income Statistics

The development of agricultural statistics in Canada has followed a pattern similar to that of many other countries. At first, the emphasis was placed on population and commodity information – the number of farms and farmers, number of hired workers, acreage of various crops, yield estimates, livestock populations, etc. In Canada, particular emphasis was placed on various measurements of the cereal grain and oilseed crops because of their great importance in the export market. Not only were the statisticians concerned with physical commodity information but at the farm level, until recently, the various advisory services were production-oriented and worked under the assumption that greater production automatically resulted in greater returns to the farmer. For the farmer, during periods of stable prices, this was undoubtedly true. Since the end of World War II, the situation has changed.

---

* Mr. Proud is Chief of the Farm Income and Prices Section, Agriculture Division, Statistics Canada. This article is extracted from a paper presented at the 1975 Conference of Commonwealth Statisticians held in the Barbados.

Farm extension workers (provincial government advisors) are now as concerned with the financial aspects of the farm business as with various elements of crop and livestock husbandry. At the university level, departments of agricultural economics have grown from positions of relative obscurity to a level of parity with the other agricultural faculties. In addition, regional planning has become an important part of federal and provincial efforts to improve conditions in areas of low income.

These and many other factors led to increased interest in statistics measuring economic conditions in the farm sector. At first, estimates, by province, of farm income (composed of gross farm receipts, farm expenses and depreciation, realized net farm income, value of inventory changes and total net farm income), which have been produced in Statistics Canada since 1926, were adequate for macro-analysis. Soon however, much more detailed information was required. This was partially provided by information derived from the quinquennial agricultural censuses, and although the financial information from this source was somewhat limited, at least it could be obtained on a sub-provincial basis. For planning purposes, a major limitation was that this information was available only every five years. It was also recognized that over time a farmer's dependence on income from the farm has diminished and that measurements of net income from farming were not necessarily indicative of a farmer's economic well-being.

Obtaining Data from Tax Returns

It is against this background – the requirement for detailed information on an annual basis of farmers' total income and the access to income tax data granted to Statistics Canada through the Statistics Act – that the following methods have been developed.

In its initial stages in 1971, the tax record access project concentrated on developing an efficient data capture system designed so as not to affect the normal flow of documents moving through the processing system of Revenue Canada. At this time, only tax returns from four of Canada's ten provinces received attention. The following year, the project was expanded to encompass the whole of Canada.

In order to understand the system which has been developed to obtain information from farmers' tax returns, it is first necessary to have some knowledge of the T1 individual tax return. To complete this return, three types of information must be provided:

1. Identification – Name, address, social insurance number, age.
2. Income – Gross and net by source.
3. Deductions – Unemployment insurance premiums, personal exemptions, medical expenses, charitable donations, etc.

After completed forms are forwarded to Revenue Canada by taxfilers, the forms then enter the system outlined in the diagram of the Taxation Data Capture System (Chart 1.) The "assessment" action and "creation of assessing file" cover a large number of registration, recording and checking operations performed by Revenue Canada. During these operations, considerable data is retrieved from the form and stored on computer tapes. It is from this information that the **personal data file** is produced. This file contains general information on all taxfilers and therefore on all persons reporting farming income on the individual tax return. Unfortunately, while farming income is segregated on the tax return, income from almost all other businesses is simply listed as "Business Income".

It is a relatively easy matter for Statistics Canada to split the personal data file and produce a file of about 380,000 taxfilers reporting farm income. Information available in the file includes:

- Gross farm income
- Net farm income
- Off-farm income
  - a) by source
  - b) gross
  - c) net
- Age of operator.

Such measurements of farm and off-farm income can be classified on a provincial and sub-provincial basis. These series have proved to be extremely useful additions to the knowledge of the economic situation of the farm sector. However, other very valuable data can also be extracted, although with considerably more difficulty, from farmers' tax returns.

All taxfilers reporting income from farming must complete a Statement of Farming Income and Expenses (Table 2). Normally, none of the material provided on this page is transferred to computer tapes by Revenue Canada as it is used only as a check against what appear to be abnormal entries elsewhere in the return. So, the Agriculture Division devised a system to obtain the detailed cash receipt and expense data reported on this statement.

It would be both different and expensive to extract this information from every farm taxfiler's statement because there were about 380,000 returns. Another obstacle is that Statistics Canada's access to this material is conditional on not interrupting the flow of documents through the Revenue Canada processing system. The solution has been to use a sample of farmers' tax returns. Fortunately, Revenue Canada also is interested in extracting very detailed information from a certain number of returns. This sample, stratified by net income, area and tax status, has come to be known as the "Green Book Sample" taking its name from an annual publication of Revenue Canada containing information on average earnings by income class and location of worker. Any returns included in this sample which report either gross or net farming income and diverted to the Statistics Canada processing unit. There are about 40,000 returns, a more than 10 per cent sample.

The front page of the tax return containing all the identifying information provided by the taxfiler, plus various identity codes added by Revenue Canada, is photocopied along with the Statement of Farming Income and Expenses. Certain other information located on other pages of the return, such as farm acreage, is transferred to the photocopied statement. The original document is then returned to the Revenue Canada processing system and eventually is stored at the area district office.

The next stage in the Statistics Canada systems is a coding operation indicating within fairly narrow boundaries of the farm.

The coding operation is followed by the clerical editing phase, probably the most important operation performed during the processing of the documents. Although a standard blank Statement of Farming Income and Expenses is made available to every farmer, the taxfiler does not have to follow the exact format of the Statement; that is, each farm taxfiler has some discretion as to the form of the statement and the detail included. Only about 30 per cent of those included in the sample completed the current standard statement. Of the remainder, about half used standard statement forms printed for previous tax years, with the remainder providing statements in a variety of forms. All such statements have to be examined and in many cases, data must be transcribed to be the correct Statement of Farming Income and Expenses. Often, the clerks editing the Statements must allocate "written in" items to their appropriate locations on the form.

Following the clerical editing program, all references to names and addresses are deleted to preserve the confidentiality of the copied returns. After this deletion, there is no way that an individual return can be identified with a particular person.

The next step is the transfer of the raw data from the forms to a format easily handled by the computer. After some experimentation, it was discovered that the most efficient transfer, from the standpoint of costs and the availability of resources, could be achieved by first entering the information, with the respective codes, on adding machine tape (journal rolls) and then using an optical character reader (IBM 287) to produce a coded computer tape.

Further computer edits and some resulting manual adjustments lead to the creation of a clean tape file. It should be remembered that this file contains a sample of the returns of farm taxfilers (approximately 40,000). Expansion of the sample to provide provincial estimates of all items is achieved by matching with the "Green Book" master file and applying the expansion factors already developed by Revenue Canada and contained in that file. A variety of series cross-classified in different ways can then be produced.

Information obtained from Individual Tax Returns

Examples of the type of information that can be obtained using tax returns are displayed in the accompanying bar chart (Chart 2), and table (Table 1). Information contained in the bar chart (Components of Average Total Net Income by Gross Farm Income, Canada, 1972) is obtained directly from the data file, which contains the records of all farm taxfilers. The chart itself emphasizes the importance of the total income picture and illustrates a number of interesting relationships. Most noticeably, off-farm income is highest at the lowest gross farm income levels. It declines as gross farm income increases until it reaches a minimum at a level of gross farm income slightly below $20,000. From this point, off-farm income remains relatively constant. An examination of the "Farm Income" component of the chart clearly indicates that the income position of individuals engaged in agriculture cannot be measured solely on the basis of farm income. Lowest levels of total net income are received not by those with lowest levels of gross and net farm income but by those with somewhat higher farm incomes combined with considerably lower levels of off-farm income.

Because detailed farm cash receipt information can be obtained from all the records in the "Green Book" sample, it is possible to classify these farms into product types on the basis of agricultural sales. For this classification, a level of 51.0 per cent or more of total sales was used to allocate the returns. For example, a return was classified as a "cattle type" if the income from cattle listed on the Statement of Farming and Expenses accounted for at least 51.0 per cent of total sales.

From Table 1, it can be seen that although dairy farms had the highest net farm income in 1972, they also had the lowest non-farm income so that when all sources of income were considered, dairy farms ranked sixth in total net income. This is quite understandable when one notes that wages and salaries are the most important source of off-farm income. A dairy farming operation is probably the most consistently time-consuming agricultural enterprise, leaving very little opportunity for off-farm work. The low value for business income probably results from this same lack of time. High net farm income from poultry operations occurs because, in Canada, the poultry industry over time has concentrated in fewer, bigger farms. Relatively high earnings from wages and salaries from fruit and vegetable operations probably result from two factors. It

OBSERVATIONS

Consumer Price Indexes for Regional Cities

The first issue of the new publication *Consumer Price Indexes for Regional Cities* was released in September, in connection with the August indexes. This publication present CPI information of the 14 Regional Cities at a considerably greater level of detail than was previously published. In addition to the all-items and seven major component indexes, 22 other indexes at varying levels of disaggregation are now available in this publication.

The publication also presents historical information at the all-items level dating from April 1973 to the most current period.

Readers wishing to become regular subscribers of this new monthly publication (Catalogue 62-009) should order it from the Publication Distribution Unit, Statistics Canada.

The *Statistics Canada Daily* will continue to publish limited information on Regional City CPI's on the day of release.

Technical Report on Population Projections for Canada and the Provinces, 1972 - 2001

In June 1974, Statistics Canada published its first official series of population projections *(Population Projections for Canada and the Provinces, 1972 - 2001*, Catalogue 91-514). This report is a technical supplement to the aforementioned publication. It describes in detail Statistics Canada Population Projections Model (SCPM) and includes several research studies on mortality, fertility and migration that were carried out to develop future hypotheses for population projections. Besides highlighting some innovative approaches to population projections, the report contains a wealth of data series and in-depth analyses that will enhance the present knowledge of the demographic situation in Canada.

Copies of the Technical Report (Catalogue 91-516) as well as the earlier publication (Catalogue 91-514) may be ordered from Publications Distribution, Statistics Canada.

A Guide to the National Income and Expenditure Accounts

(Definitions, Concepts, Source and Methods)

This new volume published by Statistics Canada in October 1975 is a comprehensive description of, and guide to, Canada's National Income and Expenditure Accounts. It consolidates and updates the work which has gone forward in this field since the last compendium was published in 1958. The new volume is much more comprehensive than the earlier work, and contains the following chapters:

Part I, The annual estimates

Chapter

1. Introduction.
2. What is New in this Report.
3. The Conceptual Framework of the National Income and Expenditure Accounts.
4. Four Sectors of the Economy: The Sector Accounts System.
5. Persons and Unincorporated Business.
6. The Government Sector.
7. Corporate and Government Business Enterprises.
8. The Non-resident Sector.
9. The Measurement of Output at Constant Prices: Value, Volume, and Price Relationships.
10. Income and Product by Industry.
11. Income and Product by Region.

12. The System of National Accounts: Linkages from Income and Expenditure Accounts to Other Parts of the System.
13. International Comparisons of National Income and Expenditure Statistics.
14. Notes on Auxiliary Tables.

Part II. The Quarterly Estimates

Chapter

15. The Quarterly Framework: Concepts, Definitions and Problem Areas.
16. The Quarterly Estimates: Sources and Methods.

This new descriptive guide to the Accounts constitutes Volume 3 of a planned set of three volumes which will contain the complete record of Canada's National Accounts. Volumes 1 and 2, now being printed, contain the statistical estimates: Volume 1, the annual estimates back to 1926 and Volume 2, the quarterly estimates back to 1947.

Available from Queen's Printer, Ottawa (Catalogue 13-549E)

Volumes 1 and 2 – To be announced.

Financial Statistics on Religious Organizations

The first issue of *Selected Financial Statistics on Religious Organizations* contains the results of a new survey conducted by the Marketing and Services Division of Statistics Canada. The survey dealt only with the "Canadian Charitable Organizations" registered as such with Revenue Canada (Taxation). This category includes most of these organizations.

According to the revised 1970 *Standard Industrial Classification*, religious organizations are defined as "establishments primarily engaged in providing facilities for holding religious services or for the promotion of religious activities. Faith healers are included. Establishments maintained by religious organizations primarily for educational – health, charitable, publishing, or other purposes are classified according to their principal activity with the appropriate industries".

The source for the survey data is the financial statements submitted by the registered charitable organizations to Revenue Canada along with their tax returns.

Table 1, reproduced here, presents "major statistics" including total operating revenue, total operating expenditure and the net difference between them.[1] Other tables present a more detailed distribution of these statistics.

Selected Financial Statistics on Religious Organizations (Catalogue no. 61-211) is available from Publications Distribution, Statistics Canada.

Total Revenue and Expenditure by Province

Province	Number of establishments	Total revenue	Total expenditure	Difference
			$'000	
Newfoundland	441	10,420	8,651	1,769
Prince Edward Island	168	3,321	2,715	606
Nova Scotia	1,090	22,384	20,241	2,143

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1]Excludes profits (net of losses) of government business enterprises. [2]Includes the withholding tax applicable to this item. [3]Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4]Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5]Includes net income of independent professional practitioners. [6]See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1]Includes defence expenditures. [2]Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3]Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4]The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5]See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] This item differs from column 6, table 1.1 by excluding the adjustment which has been made to take account of the accrued earnings arising out of the operations of the Canadian Wheat Board and the Canadian Co-Operative Wheat Producers. [2] Includes all interest on the public debt paid by government to persons. [3] Charitable contributions and bad debts. **For source see table 1.9.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

Table 2.3: industrial production, volume indexes (1961 = 100), based on the 1960 standard industrial classification – continued

year and month	durable manufacturing															
	primary metal industries					metal fabricating (ex mach. & transportation equipment)							machinery (except electrical)	transp. equipment		
	total	iron & steel mills	steel pipe & tube mills	iron foundries	smelting and refining	total	boiler & plate works	fabricated structural metal	ornamental & architectural metal	metal stamping, pressing &coating	wire & wire products	hardware, tool & cutlery		total	aircraft and parts	motor vehicles[1]

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. **Source: Quarterly Report on Job Vacancies (71-002), Statistics Canada.**

---

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S.I.C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C. P. I., on average, during the year 1974. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month						ratio of inventories owned to shipments
				owned[3]	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Prior to March 1973 included smoking, chewing and twist. From March 1973 on, includes tobacco intended for pipe smoking only. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), Statistics Canada.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property. **Source: Canadian Housing Statistics, Central Mortgage and Housing Corporation.**

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators. **Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Quarterly Shipments of Flush Type Doors (wood) by Canadian Manufacturers (35-004), Hardboard (36-001), Rigid Insulation Board (36-002), Particle Board (36-003), Primary Iron and Steel (41-001), Stoves and Furnaces (41-005), Steel Wire and Specified Wire Products (41-006), Domestic Refrigerators and Freezers (43-001), Cement (44-001), Concrete Products (44-002), Gypsum Products (44-003), Mineral Wool (44-004), Products made from Canadian Clay (44-005), Asphalt Roofing (45-001), Sales of Paints, Varnishes, and Lacquers (46-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when their current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and imcome. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

Note: Components may not add to totals due to rounding and partial revisions. [1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Not available on a monthly basis. [4] Includes loans to finance companies which are affiliates of retail merchandisers. [5] Religious, educational, health and welfare institutions. [6] Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies. **Sources: Bank of Canada Review and Dept. of Finance.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit.

[2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges.

[3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges.

[4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges.

[5] Includes bank-sponsored credit card balances.

[6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form.

[7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies.

[8] Bills due for non-commercial use of telephones, gas and electric power.

[9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer** Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500, 000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

---

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada Aviation Statistics Centre (51-004) Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. **Source: Bank of Canada Review.**

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

SOURCE: FINANCIAL FLOW ACCOUNT (13-002), STATISTICS CANADA.

(Continued from page 7)

is a seasonal operation with little work being done on the farm during the winter months, and the farms usually are located near centers where other employment is available. In contrast, grain farming is very much a summer occupation for prairie farmers, but these farms often are located many miles from towns providing alternative employment. These factors should be taken into account when using the farm income data to study the profitability of various types of farming.

Possible Future Developments in the use of Farm Tax Returns

There are three main aspects of the Agriculture Division's future plans in using tax returns.

1. When it is possible, instead of using a sub-sample of the "Green Book" sample, a sample will be drawn specifically on the basis of gross farm income.

2. It would be both extemely interesting and useful to match returns over a period of years to obtain information on those who enter and leave the agricultural sector

3. Using certain identification codes currently only partially developed, it should be possible to develop income series for the farm family unit.

TABLE 1. Average Net Income per Farm Taxfiler by Source and Type of Farm, Canada, 1972

Farm type	Net farm income	Wages and salaries	Business income	Rental and investment income	Other income	Total non-farm income	Total net income
	dollars per farm taxfiler						
Dairy	3,406	781	57	453	249	1,540	4,946

STATEMENT OF FARMING INCOME AND EXPENSES

T2042
REV. 74

For the Period______________19____ to______________19____

NAME______________________ADDRESS______________________

- Farmers using the "Cash" method of computing income must complete this statement, or provide a statement in equivalent detail. **Attach one copy of the statement to the return which you mail to the Taxation Data Centre** and keep a copy for your records.
- Farmers using the "Accrual" method will file a Profit and Loss Statement in equivalent detail and a Balance Sheet.
- Include the total income and expenses of a partnership. See Farmer's and Fisherman's Tax Guide for further information.

EXPENSES

CANADIAN STATISTICAL REVIEW

Cette revue est disponible en édition française. Revue Statistique du Canada nº 11-003F au catalogue.

Series published in this Review are available from CANSIM, the computerized time series data bank of Statistics Canada, on printouts or in machine-readable form for use on computers. Identification numbers given as a reference at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada. It should be noted that all time series in CANSIM are regularly updated as new or revised data are released. Annual figures are also available from CANSIM, more information can be found in the *CANSIM Summary Reference Index* and the *CANSIM Series Directory*. Both the documents are available directly from CANSIM staff.

Seasonal Adjustment

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant.

Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation caused by the difference in the number of working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series still contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

. .	figures not available.
. . .	figures not appropriate or not applicable.
- -	amount too small to be expressed.
–	nil or zero.
†	advance estimates.
c	correction
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

Statistics Canada should be credited when republishing all or any part of this document.

Ottawa, K1A 0T6.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS

Third Quarter 1975 – Advance Information

Introductory Review

Gross National Product, seasonally adjusted at annual rates, was $157.4 billion in the third quarter, an increase of 4.4 per cent from the second quarter level; after allowing for the effects of price changes, real GNP increased by 1.0 per cent. This was the second consecutive quarter of positive real growth following four quarters of declines or stagnation, and together with the large volume of inventory liquidation which occurred during the quarter, adds support to the view that the economy is beginning to recover. Investment in residential construction and personal expenditure on consumer goods and services, historically the strongest expenditure aggregates in the early stages of recovery, both showed substantial increases and in fact accounted for virtually all of the third quarter real growth. There was a decline in both current and constant dollar exports, which had been a major contributor to the weakness in real GNP through the downswing of the business cycle in the last three quarters of 1974 and the first quarter 1975, and at the same time an increase in the level of imports. This led to a large deficit on foreign trade in goods and services, but the third quarter level was still somewhat below the record set in the first three months of the year. The increase in output was accompanied by an acceleration in the price level, as the implicit deflator for Gross National Expenditure measured net of the value of the physical change in inventories increased by 3.4 per cent, compared with 2.4 per cent in the second quarter. The largest increase occurred in the deflator for government current expenditure on goods and services, which rose 6.5 per cent; about half of this increase resulted from the payment of cost of living allowances. The personal expenditure deflator increased at a slightly higher rate than last quarter (2.2 per cent compared with 2.0 per cent) as the non-durable goods deflator rose by 3.9 per cent, reflecting increased prices in all components, particularly in food and gas. On the other hand, the deflator for durable goods increased by only 0.2 per cent.

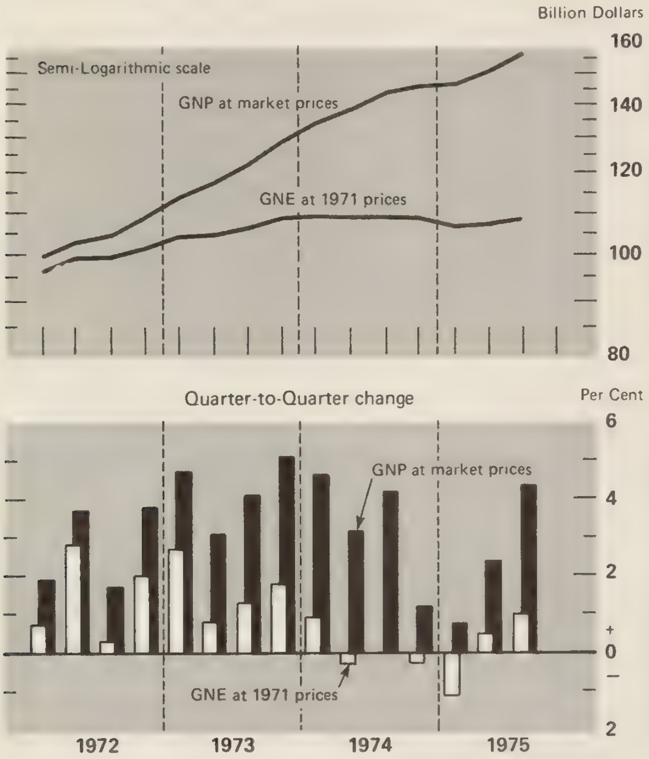
Consumer Outlays

Personal expenditure on consumer goods and services reached a level of $93.5 billion in the third quarter, an increase of 4.9 per cent from the second quarter. This was the largest percentage increase in current dollar consumption since the first quarter of 1951. In real terms, personal expenditure grew by 2.6 per cent, most of which was accounted for by 9.5 per cent real growth in expenditure on durable goods (which in turn resulted from strong spending on automobiles) and by a 5.8 per cent increase in real expenditure on semi-durable goods. Although current dollar expenditure on non-durable goods rose by 3.3 per cent, constant dollar spending declined marginally as a result of lower real expenditure on food, and oil, gas and grease.

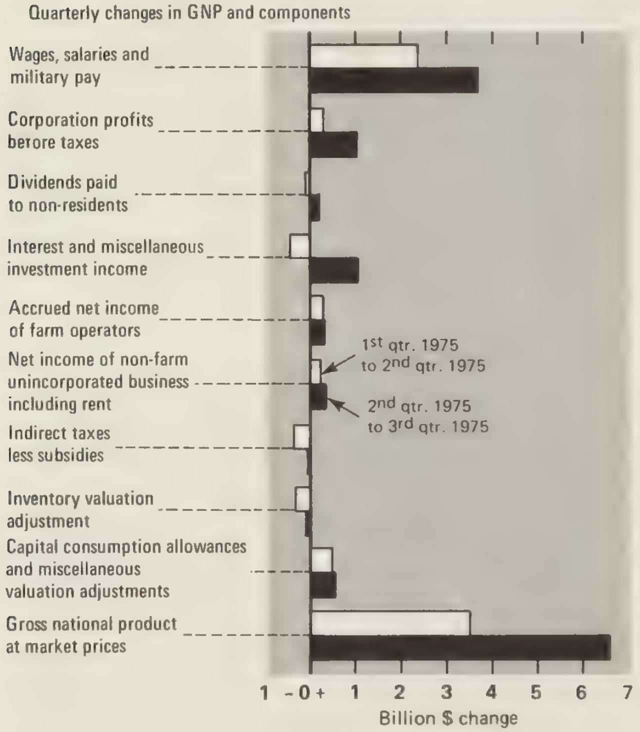
Fixed Capital Formation

After a weak second quarter, total gross fixed capital formation increased in the third quarter by 5.2 per cent to a level of $38.4 billion. In real terms, gross fixed capital formation grew by 2.4 per cent, largely as a result of an increase of 15.0 per cent in residential construction, which represents about one quarter of the total increase in real final domestic demand; although this was again the strongest rate of growth since the early 1950's, the third quarter level of residential construction was approximately 15 per cent below the peak reached in the second quarter of 1974. Business outlays for plant and equipment increased by 0.8 per cent in real terms, as investment in machinery and

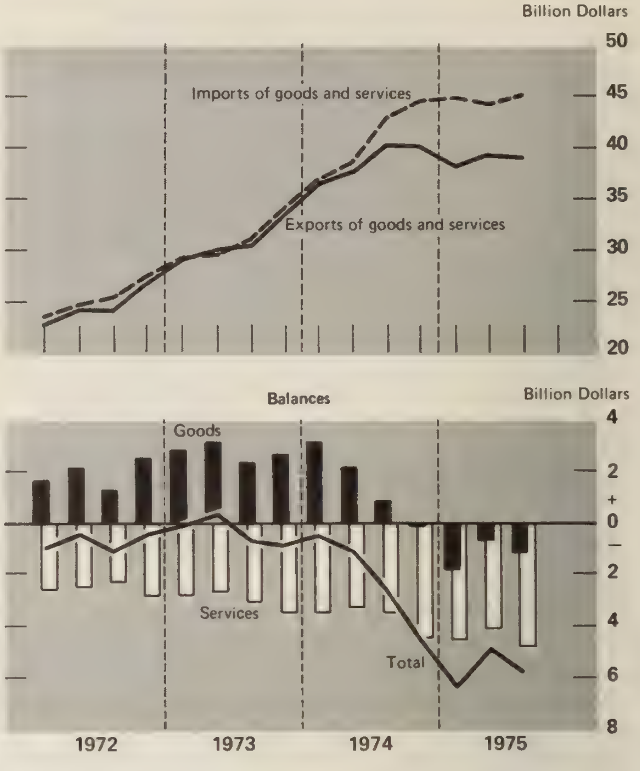
Gross National Product, seasonally adjusted at annual rates, was $157.4 billion in the third quarter, an increase of 4.4% from the second quarter level; after allowing for the effects of price changes, real GNP increased by 1.0%.



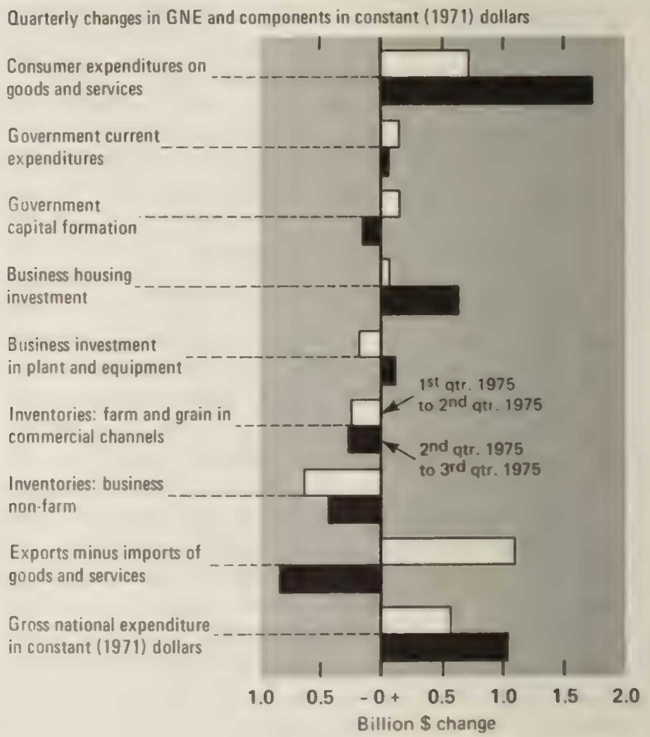
Corporation profits before taxes grew by 6.2% in the third quarter. Labour income rose by 4.3%; most of the increase resulted from higher earnings.



Exports of goods and services fell by 0.2% to $39.3 billion. Imports increased by 1.9% to $45.0 billion, with the result that the deficit on trade rose to $5.7 billion.



Exceptional gains in personal expenditure and in residential construction were partially offset by a deterioration in net exports and a larger volume of inventory liquidation.



All quarterly data adjusted for seasonal variation and at annual rates.

equipment rose by 3.0 per cent and business non-residential construction fell by 1.9 per cent. It would appear that non-residential construction had been sustained in the first half of the year by a carryover from projects initiated last year, the effects of which were apparently lessened in the third quarter. It should be noted that the rate of growth in non-residential construction in the first nine months of the year is insufficient to meet the level forecast by either the annual survey of intentions or the mid-year review of this survey.

Inventory Investment

Investment in inventories continued to decline, as the value of the physical change in inventories fell to −$1.8 billion from −$0.7 billion in the second quarter; most of this occurred in non-farm business. Despite the large increase in personal expenditure, inventories at the retail level increased strongly, as a result of an inventory movement into retail trade from the wholesale and manufacturing levels. The retail stock-to-sales ratio decreased in the third quarter, and the fact that the value of the physical change in retail inventories was negative in the first two quarters suggests that the inventory liquidation commonly observed around recessionary turning points may already have occurred in this sector. The value of the physical change in manufacturing inventories was −$2.0 billion in the third quarter following a liquidation of $0.5 billion in the second and a very moderate accumulation in the first. Within manufacturing, the third quarter liquidation was equally distributed between durable and non-durable goods-producing industries, and was concentrated in the stock of finished goods rather than goods in progress or raw materials.

The External Sector

Exports of goods and services fell by 0.2 per cent to $39.3 billion. Exports increased to the U.S. where recovery is already well under way, but there were reductions in the level of exports to Europe and Japan. Imports increased to $45.0 billion, with the result that the deficit on trade in goods and services rose to $5.7 billion, compared with $4.8 billion last quarter and a record $6.3 billion in the first quarter.

The Government Sector

Total government expenditures (excluding intergovernment transfers) increased by 6.0 per cent, the largest quarterly increase of the year. Transfer payments to persons grew by 8.5 per cent, with most of the increase at the federal level as a result of increases in unemployment insurance benefits and old age security pensions, while current expenditure on goods and services rose by 6.9 per cent. About two thirds of this increase occurred at the local government level and in hospitals and reflected cost of living payments. These payments do not affect constant dollar government spending on goods and services, and as a result, real current expenditure on goods and services increased by only 0.4 per cent. Total government revenue (excluding intergovernment transfers) increased strongly in the third quarter from the irregularly low level of the second quarter, and the deficit in the government sector, on a national accounts basis and including the Canada and Quebec pension plans, fell from $7.0 billion in the second quarter to $5.2 billion in the third. The federal government deficit remained unchanged at $5.3 billion.

Incomes

Measured in terms of factor incomes, the increases in current dollar GNP resulted primarily from increases in corporation profits before taxes, interest and miscellaneous investment income, and wages, salaries and supplementary labour income. Corporation profits before taxes grew by 6.2 per cent in the third quarter following a 1.9 per cent increase in the second. Profits in the manufacturing industry as a whole increased marginally while total mining profits were up substantially as a result of increases in the mineral fuels industry. Total labour income rose by 4.3 per cent, most of which occurred in the service-producing industries (again, this was in large part a result of the cost of living allowances paid in the third quarter), as strikes significantly affected the goods-producing industries. Most of the increase in labour income resulted from higher earnings, as there was little change in employment during the quarter. In spite of continuing rises in operating expenses, accrued net income of farm operators was up 9.0 per cent. There was a general increase in the income from total farm production, especially in wheat as a result of two-price wheat subsidy paid in the quarter. Net income of non-farm unincorporated business including rent increased by 4.3 per cent, with the largest increases in construction, retail trade and services.

OBSERVATIONS

Regional Advisors

The Statistics Canada User Advisory Services Division has officers across Canada. Their titles, Regional Advisors, Data Access and Use, reflect the dual-purpose nature of their roles. In addition to giving information about what data is available from Statistics Canada, these officers also provide the public with advice on how to use the data. The following list gives the names and addresses of these advisors.

Mr. Bill Pawluk,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
P.O. Box 8556,
3rd Floor, Viking Building,
Crosbie Road,
ST. JOHN'S, NEWFOUNDLAND. A1B 3P2

(Tel.: 709-726-0713)

Ms. Cathy MacNutt,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
Sir John Thompson Building,
1256 Barrington Street,
HALIFAX, NOVA SCOTIA. B3J 1X6

(Tel.: 902-426-5331)

Mr. J. Paul Légaré,
Regional Advisor, Data Access and Use,
User Advisory Services,
Statistics Canada,
1500 Atwater Avenue,
14th Floor, Alexis Nihon Plaza,
MONTREAL, QUEBEC. 43Z 1X5

(Tel.: 514-283-5724)

Mr. Gerry Finn,
Regional Advisor, Data Access and Use,
and

The Future Growth of Households in Canada[1]

Household and family projections are increasingly in demand by government departments and industries. The costs of a large number of government programmes are directly influenced by the number of households and families. Long-range planning by housing agencies and private builders requires information on prospective trends in the number and structure of household units. Furthermore, the development of public utilities, construction of roads, and production of consumer durables such as electrical appliances and furniture, are directly dependent on the future trends in households. More specifically, planners are often interested to know whether the future increase in the number of households is likely to be greater or smaller than the present growth.

In response to the foregoing demands, Statistics Canada has for the first time developed a programme of household and family projections that is co-ordinated with its main and regular programme of demographic projections. Accordingly, these projections are based on the Statistics Canada population projections published in June 1974.[2] The purpose of the present paper is to summarize the methodology used in the household and family projections and to highlight some of the projection results.[3] The methodology adopted was the same for household and family projections. This report will concentrate only on results with regard to households; the reader is referred to the original publication for the family projections.[4]

Methodology and Assumptions

The number of households and families is governed largely by the size and composition of population and by the passage of individuals through the life-cycle. Methods used for projecting households and families must therefore take into account changes in population size and structure. The **headship rate method**, which is adopted in the present projections, achieves this objective by assigning to individuals various probabilities of being household or family heads. These probabilities are in turn determined by the age, sex and marital status of the individual. The total number of households and families are then derived by application of these headship rates to the various population groups.

The Statistics Canada population projections serve as a central input to the household and family projections. The population projections were developed using a **regional component method**. According to this approach, each component of population change – mortality, fertility and migration (international and interprovincial) – was projected separately in the form of appropriate rates and ratios which were then applied to the base population to generate future population by age and sex. Among the various population projections developed through alternate combinations of the components of population change, three have been chosen

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest ant miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.1. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada.**

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1. 9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

---

[1] The labour force as a percentage of the population 14 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. Seasonally-adjusted participation rates are obtained by direct adjustment (i.e. by dividing the unadjusted participation rate by the seasonal factor). [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] Persons who have applied for or are in receipt of unemployment insurance benefit at the end of the month. [2] Annual figures are averages of 12 months. [3] Includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees under the Adult Occupation Training Act receiving U. I. benefit, prior to July 1975 included with regular benefit. **Sources: Statistical Report on the Operation of the Unemployment Insurance Act (73-001) Statistics Canada.**

---

[1] A vacancy rate is obtained by expressing the number of vacancies per thousand existing jobs (sum of vacant and filled jobs) in all industries, except agriculture, fishing and trapping, domestic service and the non-civilian component of public administration and defence. Both full-time and part-time jobs are included. [2] Includes Prince Edward Island and the Yukon and Northwest Territories for which separate reliable estimates are not available. **Source: Quarterly Report on Job Vacancies (71-002), Statistics Canada.**

[1] In calculating time lost, only the workers directly affected by the strike or lockout are taken into account: time lost by workers indirectly affected, such as those laid off as a result of a work stoppage, is not included. [2] The industry groups prior to January 1973 are based on the 1960 Standard Industrial Classification. From January 1973 forward, the 1970 S. I. C. is used. [3] The number of man-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; however, the total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. In addition, the total is revised quarterly whereas the individual categories are revised annually. [5] Includes miscellaneous manufacturing industries. [6] Includes publishing and allied industries. [7] Includes storage and communication industries. **Source: Research Bulletin, Labour Canada.**

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explonatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment Earnings and Hours (72-002), Statistics Canada.**

---

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] These rounded weights, provided as a general guide, show the relative importance of the major components of the C. P. I., on average, during the year 1974. [5] Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on home-ownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional cities' shelter indexes now contain the same elements. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)

annual average and month	shipments[1]	new orders received during month[2]	unfilled orders at end of month	inventory at end of month: owned[3]	held but not owned	all inventory held: total	raw materials	goods in process	finished products	ratio of inventories owned to shipments

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufactures values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Prior to March 1973 included smoking, chewing and twist. From March 1973 on, includes tobacco intended for pipe smoking only. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Production and Disposition of Tobacco Products Monthly (32-022), Statistics Canada; and Department of National Revenue.**

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to semi finished and rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), Statistics Canada.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

[1] In 1975, approximately 1,600 municipalities are being surveyed.

[2] This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. **Source: Housing Starts and Completions (64-002), Statistics Canada.**

[1] In this context, "softwood" refers to wood from coniferous trees, and hardwood to wood from broadleafed species. [2] Includes export shipments; the softwood lumber column includes estimates for Manitoba, Newfoundland and P.E.I. [3] Shipments by principal manufacturers. Total domestic shipments are somewhat higher. [4] Production for these items. As reported by principal manufacturers. Total production is somewhat higher. [5] Building contractors, public and utility construction and structural steel fabricators. **Sources: Peeler Logs, Veneers, and Plywoods (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. [1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when their current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and imcome. [2] 1973 and 1974 price indexes are subject to revision. [3] 1974 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

Note: Components may not add to totals due to rounding and partial revisions. [1]Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2]Includes loans on the security of household property. [3]Not available on a monthly basis. [4]Includes loans to finance companies which are affiliates of retail merchandisers. [5]Religious, educational, health and welfare institutions. [6]Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies. **Sources: Bank of Canada Review and Dept. of Finance.**

Note: Components may not add to totals because of rounding.

[1] Credit extended mainly to individuals and chiefly for personal consumption expenditures. Data exclude consumer indebtedness arising from residential mortgages, home-improvement loans and bank loans fully secured against marketable securities. Figures do not include statistics on interpersonal loans, bills owing to doctors, dentists, lawyers, and other personal service credit. [2] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with the financing of retail purchases of consumers' goods and repaid in instalments. Amounts shown exclude unearned finance charges. [3] Personal cash loans of up to $1,500 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [4] Personal cash loans over $1,500, usually repaid in instalments. Amounts shown exclude unearned finance charges. [5] Includes bank-sponsored credit card balances. [6] The data for Quebec savings bank loans are not seasonally adjusted as no seasonality is present: this series is repeated in the unadjusted form. [7] Amount owed by personal (non-commercial) credit card holders to oil companies, airlines, auto-rental firms, and international travel and entertainment credit card issuing companies. [8] Bills due for non-commercial use of telephones, gas and electric power. [9] Personal cash loans only. The data for mortgage and trust companies are not seasonally adjusted because there are not yet enough data to determine a pattern of seasonality: this series is repeated in the unadjusted form. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada; and Department of Insurance.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imports (65-007), Statistics Canada.**

[1] Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500, 000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown. **Source: Railway Operating Statistics (52-003), Statistics Canada.**

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. **Sources: Air Carrier Operations in Canada (51-002) Statistics Canada Air Carrier Financial Statements (51-206) Statistics Canada Aviation Statistics Centre (51-004) Statistics Canada.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series. Source: Bank of Canada Review.

NOTE: Components may not add to totals because rounding. [1] This series was designed to cover 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. Discussions are underway in an attempt to establish boundaries which would be more precisely defined. [2] Seasonally adjusted data for Saskatchewan have been deleted because current data could not be satisfactorily adjusted. **Source: Cheques Cashed in Clearing Centres (61-001), Statistics Canada.**

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares. **Source: Bank of Canada Review.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

Gross National Product at market prices	**134,340**	**138,592**	**144,444**	**146,144**	**140,880**	**147,312**	**150,832**	**157,432**
Gross National Product at market prices excluding accrued net income of farm operators	**131,000**	**134,648**	**140,720**	**142,216**	**137,146**	**144,056**	**147,260**	**153,540**

[1] Excludes profits of government business enterprises.

[2] Includes the withholding tax applicable to this item.

[3] Includes profits (net of losses) of government business enterprises and other government investment income.

[4] Includes an arbitrary smoothing of crop production, and standard seasonal adjustment for withdrawals of grain from farm stocks and for the changes in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.

[5] Includes net income of independent professional practitioners.

[6] See footnote 4, of Table 2.

TABLE 2. Gross National Expenditure, by Quarters, 1974 and 1975

Seasonally adjusted at annual rates

	1974					1975		
	I	II	III	IV	Year	I	II	III
	millions of dollars							
Personal expenditure on consumer goods and services	75,828	78,664	81,740	83,408	79,910	86,376	89,052	93,456
Government current expenditure on goods and services[1]	25,100	26,788	28,384	29,224	27,374	29,776	30,952	33,100

Machinery and equipment	10,448	10,528	11,156	11,556	10,922	12,412	12,388	12,924
Value of physical change in inventories	2,344	1,812	3,288	3,216	2,665	1,224	-736	-1,836
Government	-20	24	40	60	26	-20	32	32
Business:								
Non-farm[4]	3,156	1,776	2,440	3,304	2,669	768	-536	-1,712
Farm and grain in commercial channels[5]	-792	12	808	-148	-30	476	-232	-156
Exports of goods and services	36,328	37,480	40,120	40,024	38,488	38,560	39,388	39,312
Deduct: Imports of goods and services	-36,764	-38,608	-42,804	-44,524	-40,675	-44,892	-44,192	-45,028
Residual error of estimate	32	-20	288	572	218	768	-116	56
Gross National Expenditure at market prices	**134,340**	**138,592**	**144,444**	**146,144**	**140,880**	**147,312**	**150,832**	**157,432**
Final domestic demand	132,400	137,928	143,552	146,856	140,184	151,652	156,488	164,928
Detail of farm inventories and grain in commercial channels:								
Value of crop production and depletions of farm stocks of grain	-676	-652	-96	-164	-397	460	520	-456
Change in other farm-held inventories	-40	308	532	160	240	68	-112	-344
Grain in commercial channels	-76	356	372	-144	127	-52	-640	644

[1] Includes defence expenditures. Details are shown in line 45, Table 16 of the forthcoming publication *National Income and Expenditure Accounts*, Catalogue 13-001.

[2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.

[3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of the existing land and buildings.

[4] The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. (See line 8, Table 1.)

[5] In the seasonally adjusted series, the value of grain crop production in each quarter is taken as one fourth of the estimated value of crop production for the year as a whole (see footnote 4, Table 1). All other items in the farm inventories series are seasonally adjusted by standard techniques.

TABLE 3. Gross National Expenditure in Constant (1971) Dollars, by Quarters, 1974 and 1975[1]

Seasonally adjusted at annual rates

	1974					1975

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

(Continued from page 9)

here as input to the household and family projections. Summary results of these three projections are given in Table 1.[5]

Using the detailed results of the population projections in Table 1, the household and family projections model first obtains a breakdown by marital status. The three following marital status categories are used: (1) single, (2) married spouse present, and (3) ever married spouse absent (separated, widowed and divorced). A given age-sex group is first separated into single and ever married. The ever married are then partitioned into spouse present and spouse absent. These proportions are projected with a modified exponential formula that extrapolates the same rate of change as that observed between 1951 and 1971.

The second step in the procedure involves the projection of the headship rates of the various age, sex and marital status groups. Two hypotheses are adopted in regard to the future evolution of these headship rates: the low series is based on an extrapolation of the rate of change between 1951 and 1971, while the high series is based on trends during 1961 - 1971. The number of households and families can now be obtained by applying a projection of the marital status distribution and a projection of headship rates to a given population projection. In addition, each of these projections is developed at the provincial (or territorial) level. The national totals are obtained by aggregating the results for the provinces and territories.

The Statistics Canada Household and Family Projections Model (SCHM) that has been developed for these projections is thus reasonably flexible. That is, it can incorporate various assumptions regarding population growth, marital status change and headship rate change. Although 13 projections have been produced to date, only four are published in detail. Table 2 presents a summary of the assumptions underlying these four projections. It must be noted that these household and family projections are not predictions. They are to be viewed as conditional projections under stated assumptions. In view of likely variations in the factors governing household and family growth, alternate series of projections are presented in this paper.

TABLE 2. Summary of Fertility, Migration and Headship Rate Assumptions Underlying Projection 1, 2, 3 and 4, Canada, 1971 - 2001

Title	Assumed total fertility rates for Canada by 1985	Migration assumptions		Per cent of household heads in population aged 15 and over in 1986[1]
		International (net gain of population each year)	Interprovincial (gross movement of people each year)	
Projection 1	2.6	100,000	450,000	45.5
Projection 2	2.2	60,000	435,000	45.5
Projection 3	2.2	60,000	435,000	44.9
Projection 4	1.8	60,000	218,000	44.9

[1] At the 1971 Census, 39.9 per cent of the population aged 15 and over were heads of households.

Future Increase in Households

In Table 3, page 124, which presents the four household projections to the year 2001, Projection 1 reflects the "high" series and Projection 4 the "low" series at the national level. However, these two projections may not be the "high" and "low" series respectively for each province and territory. The following discussion is generally centered on these two projections in order to emphasize the range of prospects at the national level.

The continuation of the post-war trend of rapid growth in the number of households throughout the 1970's and partly through the 1980's is undoubtedly one of the most significant features of these projections. From 3,351,700 in 1951, the number of households increased to 6,062,800 in 1971, and it is expected by 1986 to reach between 8,896,800 and 9,233,800. The average annual rate of growth in households, which was 3.3% in the period 1966 - 1971, is projected to remain around 3% in the period 1971 - 1981 and to decrease gradually to a rate between 1.0% and 1.6% by the end of the century. Especially for the period until 1986, these rates of growth are considerably in excess of those projected for the total population (see Chart 1, page 126). This differential growth can largely be attributed to the emerging age structure of the Canadian population. The

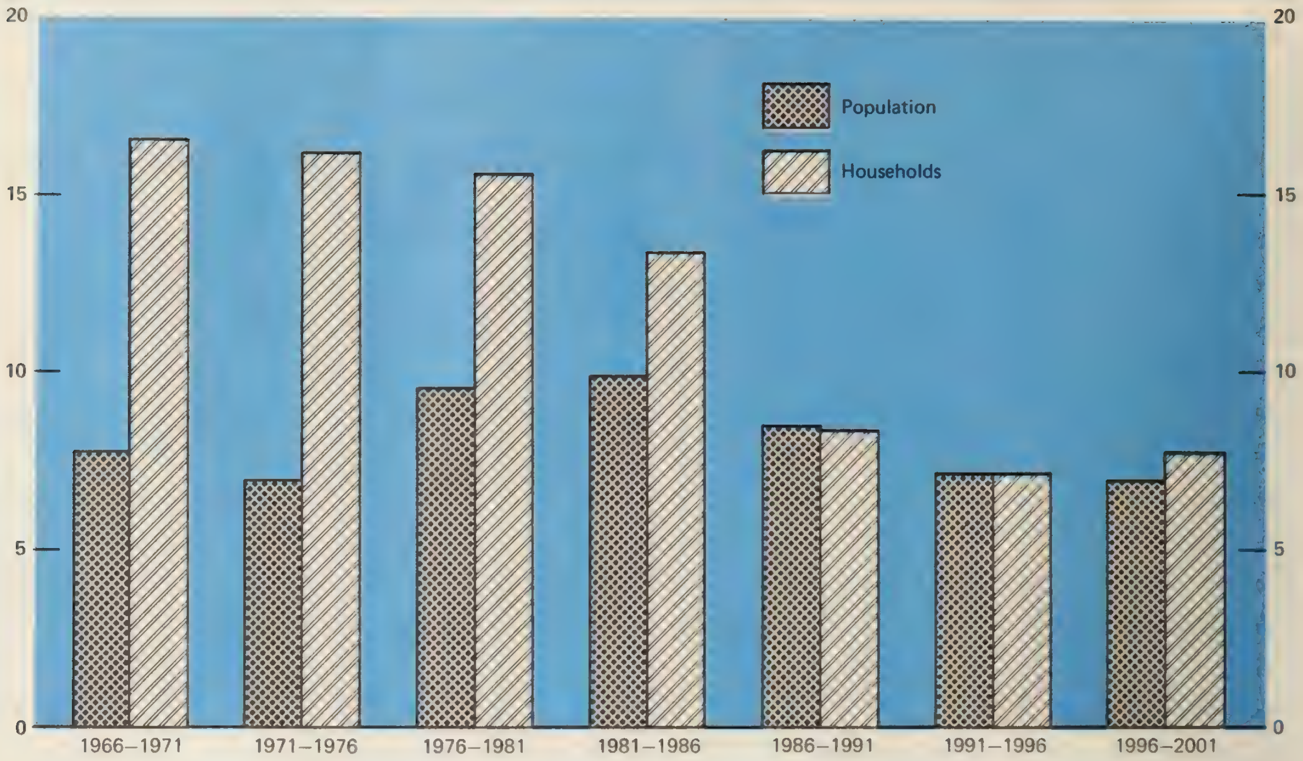
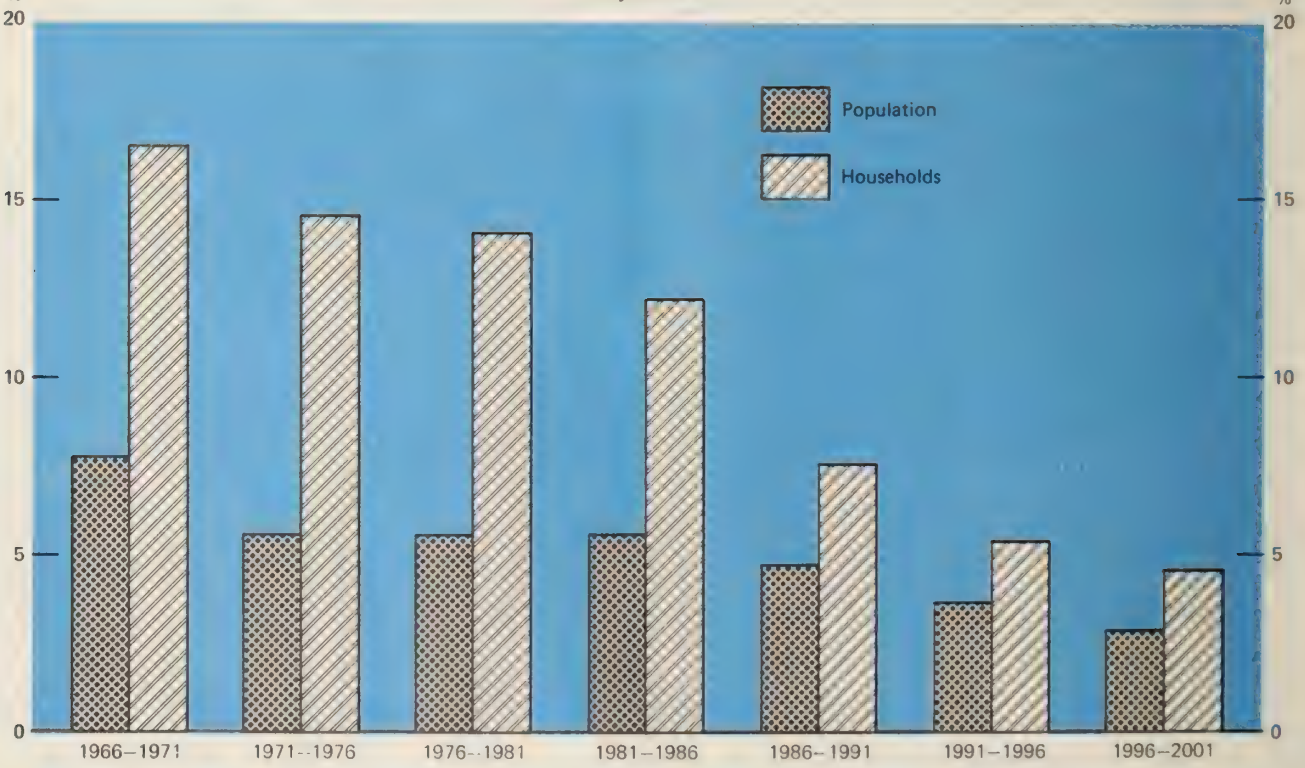
Chart — 1

Projected Increase in the Total Population and Households, Canada, 1966-2001

Projection 1



Projection 4



most significant factor here is the baby-boom generations who will reach the prime ages of family formation and will establish their own households in this period.

A host of social and economic factors are also likely to contribute to the growing number of households in the future. Many young and old people are today financially better off than their predecessors. This trend, coupled with the changing attitudes towards privacy, may lead them to live apart from their families in greater numbers than in the past. The trends in divorce and illegitimacy rates also tend to increase the splintering of the population with regard to living arrangements.

Concomitant with this rapid growth in households, the projections reveal a tendency for their **average size** to become increasingly smaller. From a five-member household that was typical of the traditional Canadian society, the size has steadily fallen to slightly over four during 1951 - 1961, and then to 3.6 in 1971. The further decline that is expected would bring the average household size in the range of 2.7 to 3.0 persons before the turn of the century.

Composition of Households

The projection results indicate that husband-wife households will continue to be by far the most important type of household. However, as a result of changing attitudes regarding marriage, family formation and living arrangements, a rapid growth is expected in households headed by persons who are single, widowed or divorced. The latter group is anticipated to increase from 1,590,000 in 1971 to between 2,499,000 and 2,667,000 in 1986.

The age composition of household heads, along with the types of households, are among the most important variables affecting the demand for housing, household facilities and related needs. Following the movement of the baby-boom generations through the life-cycle, households headed by persons aged 25 - 34 are expected to experience rapid growth in the period 1971 - 1991, while households with heads aged 35 - 44 will increase especially between 1976 and 2001. Similarly, the increase in households with heads aged 45 - 54 will occur principally after 1986.

Another important aspect deserving attention is the prospect of non-family households in Canada. In this study, a non-family household denotes that maintained by a person who is not the head of a family. At the 1971 Census, non-family households constituted 19 per cent of total households. This proportion is expected to increase to about 22 per cent by 1986. The stronger growth of non-family households will undoubtedly affect the demand for related goods and services in the coming years.

Regional Differentials

The foregoing trends and patterns of household and family increase are anticipated to take place across Canada. Nevertheless, differences of considerable magnitude in the rates of growth do exist among provinces and territories. This is due particularly to interprovincial migration, but also to a variety of other factors such as differentials in nuptiality, divorce, fertility, illegitimacy, living arrangements and housing facilities. Concentrating on the period 1971 - 1981, the rate of household growth for Ontario, Alberta and British Columbia is expected to be above the national average of 3 per cent a year. Projections for Newfoundland, New Brunswick, Quebec and Manitoba are in the range of 2 to 3 per cent growth per year. In Prince Edward Island, Nova Scotia and Saskatchewan, the rate would be below 2 per cent in this period 1971 - 1981. It is also noted that, for each province, the projected rate of increase in households is above the projected rate of increase in population size.
